Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field

R.E. Drover — Director, Business, Provincial and
Municipal Relations Division

B.J. Lynch — Director General, Business Statistics

R. Platek — Director, Methodology Division

M. Podehl — Director, CANSIM Division

G.J. Brackstone — Director General, Methods
Development Branch

A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises Division

L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census

P.N. Triandafillou — Director, Industry Product Division

J.S. Wells — Director General, System of National
Accounts and Analysis Branch

D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Observations

Seasonal Variations in the Canadian Economy Employment and Unemployment

Catalogue No. 16-501, in Canada \$10.00,
elsewhere \$12.00

For the first time in many years, the impact and evolution of seasonal variations in the Canadian economy is analysed in a new series of studies being initiated by the Time Series Research and Analysis Division of Statistics Canada.

Because seasonality affects different economic activities in varying degrees, each study will focus on one economic sector.

The first issue deals with the role played by seasonal variations in employment and unemployment. The year-to-year changes in seasonal patterns and their relations to behavioral attitude and cyclical economic movements are described in detail. Using tables and graphs, data are presented from 1966 to 1980 for various age-sex categories and industries at Canada and provincial levels.

Contents:

- causes and significance of seasonality
- methodological concepts
- the impact and evolution of seasonality in unemployment, employment, industrial employment and in the Canadian labour force
- summary and conclusions

Economists and statisticians will find this study enlightening and business administrators, policy makers and union leaders will find it of practical value in understanding how seasonal variations affect Canada's labour force.

The succeeding issue is to be concerned with seasonal variations in prices.

Origin and Destination of Goods of Merchandising Establishments

The province of origin and destination of goods of wholesale merchants for 1979 is now available for the first time. Data for 19 wholesale categories are published in *Origin and Destination of Goods of Merchandising Establishments, 1979* (Cat. No. 63-540, \$8.00 in Canada, \$9.60 elsewhere). The values and percentages shown in the publication refer to the physical location (province, territory or foreign countries) where the goods were held immediately prior to shipment to wholesale merchants (origin), and to the location (province, territory, foreign countries) where the goods were physically shipped (first destination).

In 1979, wholesale merchant establishments (excluding grain) acquired goods valued at \$73.1 billion and shipped goods valued at \$88.2 billion. At the Canada level, wholesale merchants acquired only 56.8% of their goods from their own province, while shipping 80.3% of goods within their own province.

At the provincial level, an example of the data available is for Manitoba. Wholesale merchants in this province acquired more goods from other provinces (43.6%) than from its own provincial establishments (39.2%). Imported goods accounted for \$531.7 million with farm machinery and equipment representing \$146.7 million or 27.6% of the goods acquired. The main suppliers to Manitoba wholesale merchants were Ontario with \$644.9 million (mostly machinery and equipment (including farm and electrical), food, motor vehicles and accessories, wholesalers, N.E.S. and lumber and building materials), British Columbia at \$245.5 million (mostly food and building materials), and Alberta (primarily petroleum products).

For more detailed information, contact the Wholesale Trade Section, Merchandising and Services Division, Statistics Canada, K1A 9Z9

Research and Development Expenditures in Canada

Research and Development expenditures are estimated to have grown to 1.2% of the GNP in 1982. While this is still a smaller proportion than most other industrialized countries, it marks the highest level for this country in the last decade. The stated target of the Government of Canada is a ratio of 1.5% by 1985.

Half of the Research and Development activity takes place in Ontario, due to the concentration of manufacturing and federal government establishments in that province. Quebec and the Western provinces have a little over 20% each of the national total; the Research and Development activities in the Atlantic provinces represent about 5%.

A number of other indicators show that Canada does not seem to be as active in science and technology as other industrialized countries. For example, only 7% of the patent applications filed in Canada are for inventions made by Canadians. And in 1980, the negative balance of trade in high technology commodities was over \$8 billion, 12% greater than in the previous year.

For further information, order the 1982 *Annual Review of Science Statistics* (13-212, \$6) from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0V7, or contact Humphrey Stead (613) 995-3014, Science Statistics Section, Education, Science and Culture Division, Statistics Canada, Ottawa K1A 0T6.

CANSIM MINI BASE RELEASED

The new CANSIM Mini Base will be available on January 31, 1983.

The Mini Base Series Directory which depicts the contents of this base will be released on January 21, 1983. For further information please contact Applications Consulting Services, CANSIM Division at (613) 995-0575 or 995-7406.

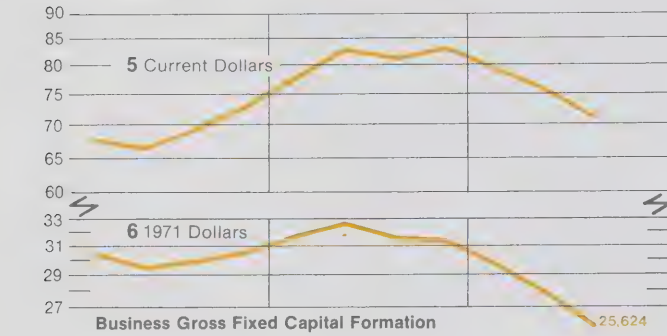

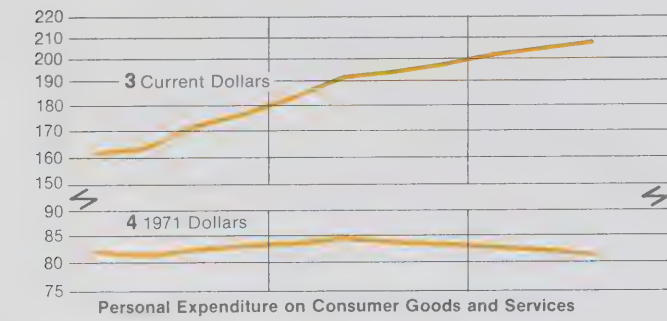

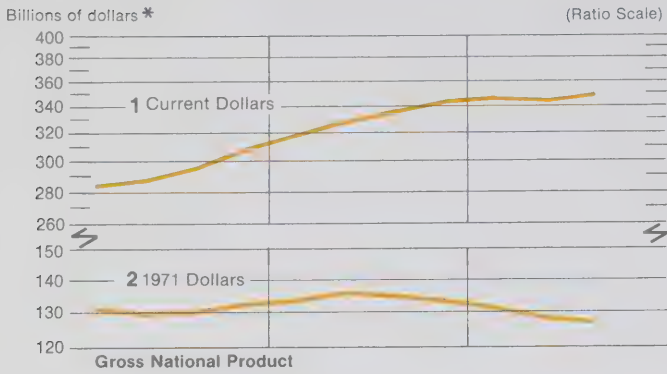

To order the 1983 Mini Base Series Directory (Catalogue 12-569E or 12-569F, \$15.00 in Canada, \$18.00 other countries), contact Publication Sales and Services, Statistics Canada Ottawa K1A 0V7 (613) 995-5078

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting.

⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

Beginning with 1978, fiancés and fiancées are included with spouses.

Source: Quarterly Bulletin, Employment and Immigration Canada. Starting with 1978, preliminary data is obtained from unpublished tabulations.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Real Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchase of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unseasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM[®] (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field

R.E. Drover — Director, Business, Provincial and
Municipal Relations Division

B.J. Lynch — Director General, Business Statistics

R. Platek — Director, Methodology Division

M. Podehl — Director, CANSIM Division

G.J. Brackstone — Director General, Methods
Development Branch

A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises Division

L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census

P.N. Triandafillou — Director, Industry Product Division

J.S. Wells — Director General, System of National
Accounts and Analysis Branch

D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Financial Activity in Canada

Third Quarter 1982

Overview

The demand for funds was exceptionally weak in the third quarter of 1982, in line with the continuing recession in the Canadian economy. Total borrowing on conventional credit markets by domestic non-financial sectors (ultimate users of funds) was \$5786 million, or 6.1% as a proportion of Gross National Expenditure. The borrowing of the second and third quarters of 1981 was more typical at 29.0% and 19.0% of GNE. The change in demand for funds from the previous quarter is attributable mainly to the private non-financial corporate sector whose share of total borrowing fell to 19% from 40% (or from an already depressed \$4009 million to a very low \$1123 million). General government accounted for \$4353 million or 75% of conventional market funds raised and government non-financial enterprises for a further \$2,130 million. The personal sector made net repayments for a third consecutive quarter. Major suppliers of funds were non-residents, provincial governments and non-bank financial institutions such as trustee pension plans.

Most of the borrowing was in the form of bonds and Treasury bills. Bank loans outstanding were reduced for the second successive quarter. In general, longer term borrowing was favoured; shorter-term borrowing was actually reduced overall, although not by the federal government.

Economic Activity

The third quarter decline in real, seasonally adjusted Gross National Expenditure of 1.0% brought the cumulative drop from a peak in the second quarter of 1981 to 6.9%, although the rate of decline moderated from that of the previous two quarters. During the quarter the unemployment rate rose from 10.9% at the end of June to 12.2% in August and September. Personal expenditure on goods and services (about 60% of GNE) declined by 1.0% in real terms, seasonally adjusted. In current dollars, personal expenditure was \$51,058 million, a decline from the

previous quarter. The personal savings rate remained very high at 13% (seasonally adjusted).

With existing excess capacity and weak anticipated demand both domestically and abroad, business gross fixed capital formation declined by a further 8.6% in real terms, seasonally adjusted. Reduced capital expenditure, continued reduction of inventories and a slight increase in profits made the private, non-financial corporate sector an atypical net lender for the quarter. Housing construction activity, as measured by housing starts declined further from a low seasonally adjusted annual rate of 114,000 in June to 86,000 in September.

Federal government net borrowing during the quarter was \$5016 million, somewhat less than the previous quarter's \$5,766 million. Provincial governments also reduced their borrowing requirements with net borrowing of \$829 million compared to \$1961 million in the previous quarter.

The rest of the world was a net borrower for the second consecutive quarter, the result of a record current account surplus of \$2,033 million.

Capital Market Developments

During the third quarter, financial markets in North America were affected principally by the depressed state of the economies and the associated weakness of demand for funds. Additionally, with an improving trend in inflation rates, interest rates were allowed to fall as the central banks pursued less tight monetary policies. Even so, seasonally adjusted M1 in Canada fell by 2.3% from the previous quarter.

With interest rates falling sharply in the United States (by over 500 basis points at the short end of the market), there was some easing of the Bank of Canada's central concern of limiting the decline in the Canadian dollar. In the second quarter, as rates had risen in the United States, the Bank of Canada had moved to maintain a positive yield differential over comparable instruments in the United States. As rates

in the U.S. fell during the third quarter, the central bank permitted them to fall in Canada, but appeared concerned to avoid too precipitous a drop. It sold \$2277 million of Treasury bills, which, at a time when the Government of Canada was borrowing \$2675 million with this instrument, helped to slow the decline. The yield on this instrument fell 340 basis points in the quarter. The increased yield differential with respect to the United States resulted in a substantial incentive to invest in Canada. The Canadian dollar rose from a record low of 76.80 cents U.S., recorded in late June, to reach 80.89 cents U.S. at the end of September.

Although yields fell across the maturity spectrum, those on short term instruments fell much more sharply than on long term instruments restoring a positive yield curve. In view of the substantial yield differential between Canadian and United States dollar denominated instruments there was a significant inducement to borrow abroad. Yields on longer term U.S. Eurodollar instruments were as much as 400 basis points lower than those on similar Canadian dollar instruments. The provinces and their utilities were the major sellers in non-resident markets. Most of these issues had terms to maturity of ten years or less. The funds were raised for general government purposes or to finance capital formation by the utilities (the Province of Ontario places foreign currency issues on behalf of Ontario Hydro). Fixed capital formation by the provincial government non-financial enterprises has remained quite strong, a marked contrast with that of non-financial private corporations. These latter placed \$474 million in net new issues, perhaps reflecting a reluctance to incur a long term liability at a time of weak demand and lower perceptions of inflation and interest rates. The Government of Canada issued \$1453 million in net new marketable issues. There were \$360 million Canada Savings Bonds redeemed, and \$5 million sold to the Canada Pension Plan. Of the federal government's gross new issues of \$2350 million, 70% had extendible features, at the holder's option. Apart from non-residents, trustee pension plans, life insurance companies, the Canada Pension Plan and provincial government special funds were the major purchasers.

The drop in yield on bonds produced some large increases in prices: for example, the Government of Canada bonds, maturing October 1st, 2001, carrying a coupon of 9.5%, which is often used as a benchmark, rose 13% in August. With the price increases prompting some holders to take their gains, share prices began to rise. Share prices were probably seen as being at their nadir, although there were very few signs of an imminent upturn in the economy.

The Toronto Stock Exchange Composite 300 Index rose 17% over the quarter, to close at 1602.0, abruptly reversing a long decline. All the sub-indices rose except real estate and construction, which fell marginally. Of the more heavily traded groups, the major rises were: financial services (which includes banks) up 19%, metals and minerals up 18%, oil and gas up 18% and industrial products up 14%.

Net new issues of shares amounted to \$383 million, an exceptionally low volume during a period of rising stock prices. The figure was depressed as a result of a large redemption of preferred shares by Dome Resources Limited.

Bank loans dropped by \$2017 million. Much of the drop was in foreign currency; in particular, the federal government repaid U.S. \$900 million borrowed to support the reserves, leaving U.S. \$500 million still owing at the end of September. The Schedule 'A' banks more than accounted for all of the drop in loan assets: the Schedule 'B' banks continued to increase their assets ⁽¹⁾. To permit continued growth, the Inspector General of Banks raised the deemed capital base of twenty two 'B' banks. The chartered banks increased their holdings of Government of Canada Treasury bills by \$2088 million, reflecting the build-up in their liquidity during a period of reduced loan demand.

"Other short term paper" rose \$1538 million, principally through issues by provincial governments (of treasury bills), holding companies and mortgage loan companies. Non-financial private corporations showed a drop of \$103 million. The increase in short-term issues, at a time when bank loans outstanding were falling, may have been partly attributable to the widening of the yield differential between these borrowing instruments. In July and August, the yield on 30-day bankers' acceptances was about 130 basis points below the prime rate but the differential widened to 170 basis points in September.

As is to be expected from the weakness in consumer expenditure, the personal sector reduced its consumer credit liability to banks by \$488 million and to others by a further \$137 million. Mortgage demand rose slowly, increasing by \$412 million, much below the third quarter of 1981's increase of \$2505 million. The housing purchase incentive programs of the federal and provincial governments did not appear to have had an impact during the third quarter.

1. The Schedule 'B' banks are closely held companies (largely foreign owned) which received their charters after the passage of the 1981 Bank Act.

Consumer Credit Demand in Canada (1961 - 1982)

Patrick O'Hagan*

Although households are the principal saving units and thus a major source of funds in the economy, they also borrow large amounts of funds for mainly two purposes — to buy goods and services and to purchase houses. The two largest items on the liability side of the household sector's balance sheet are consumer credit and mortgages. This article is an overview of some of the characteristics and determinants of consumer credit demand in the personal sector from 1961 to 1982, the period for which Financial Flow Accounts data exist for Canada. The study will also examine some of the links between the real side and the financial side of the economy, as they relate to the personal sector.

Consumer Credit in the Financial Flow Accounts

Consumer credit is credit used by persons to finance the purchase of consumer goods and services. This is essentially short-term personal debt (i.e., under three years). It consists principally of personal loans from financial institutions, and, to a lesser extent, bank charge cards and charge cards of large retail department stores and miscellaneous businesses (i.e., hotel cards, gas cards, etc.).

In the Canadian System of National Accounts, which includes the Financial Flow Accounts (FFA), what is often referred to as the household or personal sector is Persons and Unincorporated Business. Unfortunately, the necessary detail is not available to permit an adequate separation of unincorporated business. One should note that by definition consumer credit is only a liability of persons and not of unincorporated business (nor of any other sector). The consumer credit liability of the personal sector is the sum of the consumer credit asset of each of the

various suppliers of such credit. In the FFA, consumer credit consists of advances of funds to individuals to purchase goods and services, and thereby excludes business and mortgage loans, home improvement loans and loans against marketable securities or tax sheltered plans.

In the Financial Flow Accounts, two series are produced on the consumer credit liability of the personal sector, and will be referred to in subsequent sections. The first series is the quarterly net flow of consumer credit (unadjusted for seasonal variation). This refers to transactions that have occurred during a particular quarter, and can be defined as current gross new borrowings less current repayments of principal. The second series is the absolute level of consumer credit outstanding (or the level of consumer debt), which is published at the end of each year. Data are published in *Financial Flow Accounts* (Catalogue 13-002). Historical data on annual flows and year-end levels are available in *Financial Flow Accounts* (Catalogue 13-563).

In terms of the suppliers of consumer credit to the personal sector, the chartered banks provide the largest portion, with \$31.8 billion outstanding at the end of 1981. Consumer credit has increased in the banks' portfolios over the last two decades rising from 7.3% to 12.5% of their total assets. Their share of this market rose from 23.8% in 1961 to 65.5% in 1981. The near-banks (comprising credit unions and caisses populaires, trust companies, mortgage loan companies and Quebec Savings Banks) hold the second largest share, with \$8.1 billion outstanding at the end of 1981. Credit unions and caisses populaires account for most of this amount and have (with the exception of the past few years) steadily increased their consumer loans over the last twenty years. Other private financial institutions account for \$4.9 billion. Sales finance and consumer loan companies hold the major portion of this amount.

*Patrick O'Hagan is an economist, Financial Flow Accounts, Statistics Canada

This subsector has lost most of its share of the consumer loan market to the chartered banks, declining from 31.2% of the market in 1961 to 9.1% in 1981. This development is not that surprising given the degree of increased competition from the banks, resulting largely from the 1967 revisions to the Bank Act that eliminated the six percent interest rate ceiling on chartered bank loans, as well as the fact that consumer loan companies often lend at a higher interest rate than banks. Insurance companies had \$2.6 billion outstanding. This amount consists entirely of life insurance policy loans secured by the cash value of the policy. This type of borrowing has been increasing recently as many policyholders are taking advantage of clauses in their policies that permit borrowing at fixed low rates of interest ⁽¹⁾. The changes in the market shares of the suppliers of consumer credit between 1961 and 1981 are summarized in Figure I.

The Growth of Consumer Credit

The last twenty years have witnessed marked changes in attitudes towards consumer credit. The practice of many lenders, especially banks, has been to increasingly promote consumer credit over the last two decades. Large retail dealers (including automobile dealers, furniture and appliance stores and department and chain stores) have also moved heavily into the credit business. The promotion of credit by suppliers and the increasing desire of consumers to improve their standard of living coupled with the substantial increases in real personal disposable income have resulted in a remarkable growth in consumer credit. Total consumer credit outstanding grew from \$4.3 billion in 1961 to \$49.2 billion in 1981. The growth rate of consumer credit outstanding outstripped that of national output, as measured by GNP in current dollars, over most of the same period; from 1961 to 1969 consumer credit grew at a compounded annual rate of 12.4% while GNP grew at rate of 9.6%, and from 1970 to 1979 the growth rate of consumer credit was 14.8% while that of GNP was 13.2%

Figure I
Relative Market Shares of the Suppliers of Consumer Credit, 1961 and 1981

Source: Financial Flow Accounts

The pronounced growth in consumer credit outstanding, particularly in the 1970's, is shown in Figure II. Growth in consumer credit outstanding in constant dollars (as deflated by the implicit price index for consumer durables) has not been nearly as pronounced, and the sharp increase in growth rate during the 1970's (which was dominated by inflation) is almost eliminated. The trends in consumer debt on a per capita basis were quite similar to the results in Figure II. In 1961 each Canadian accounted for \$230.0 of consumer debt, and by 1981 it had risen to \$2020.0. In constant dollar terms, the amounts were \$270.0 in 1961 and \$1090.0 in 1981. These results indicate that Canadians are considerably more indebted in 1981 than they were in 1961, and that indebtedness increased most during the 1970's. In real terms, however, such indebtedness increased more rapidly during the first half of the 1970's.

In relative terms, consumer credit outstanding as a proportion of personal disposable income increased sharply in the 1960's, slowed in the 1970's, and declined in 1980-81 (see Figure III). The debt/income relationship supports the first conclusion (above) that we are more indebted now than in 1961, but points to

the 1960's as the period when such indebtedness grew most rapidly. This is consistent with personal expenditure on durables as a proportion of personal disposable income increasing rapidly in the first half of the 1960's, levelling off from 1965 to 1969 and then falling sharply during the 1969-70 recession. It increased sharply again in the early 1970's and registered a slow decline from 1973 to 1981. Almost identical movements are evident in the ratio of personal expenditure on durables as a proportion of total personal expenditure over the same period (see Figure III). Personal expenditure on automobiles as a proportion of expenditure on durables also increased sharply in the first half of the 1960's, but then this ratio posted a decline to the present. The ratio of consumer expenditure on durables to personal disposable income, as well as the two ratios of consumer expenditure on durables to total consumer expenditure and expenditure on automobiles to expenditure on durables appear to explain some of the turning points in the debt/income series, the sharp growth in this series in the 1960's, and the weakened demand for credit in 1980-81.

Figure III

Consumer Credit Outstanding as a Proportion of Personal Disposable Income, and Related Series on Personal Consumption Expenditure.

Source: Financial Flow Accounts and National Income and Expenditure Accounts

The consumer credit debt to financial asset ratio indicates that although personal borrowing has increased relative to financial assets for the period as a whole, it tapered off in the latter part of the 1970's (see Figure IV). The reversal coincides with sharp increases in the personal savings ratio (5.6% in 1971, 10.0% in 1976, and 12.4% in 1981) and is in line with the increased yield on financial assets and the increasing use of tax sheltered savings plans (RRSP's, RHOSP's) coupled with general uncertainty regarding the state of the economy. Personal sector saving in financial assets is concentrated in bank and other deposits, Canada Savings Bonds, life insurance and pensions, and equity and debt of major corporations. The increased saving of persons since 1975-76, that is in part reflected in the debt to asset ratio, appears to bear some relation to the weakening of the consumer durable expenditure component in total consumption expenditure over this same period (see Figure III). There are also some

similarities in the trend of the debt/financial asset ratio and the trend of the debt/income ratio, both often used as rough measures of the burden of consumer credit debt.

The borrowing of households is principally in the form of mortgages. Consumer credit is nonetheless still important source of funds to the personal sector. While there has been a declining trend in consumer credit debt relative to mortgage debt, consumer credit borrowing has remained within the range of 33% to 28% of total household borrowing (see Figure IV). By another measure, it is evident that consumer credit borrowings are a small portion of total debt in the economy. The percentage of consumer credit debt to total debt for the whole economy rose from 6.6% in 1961 to 7.7% in 1971, and it declined slightly to 7.5% in 1981⁽²⁾.

The Determinants of Consumer Credit Demand

The major determinants of consumer credit demand will be discussed in this section and will be examined roughly in a long-term and a short-term context. The first part of this section will deal with the short-term determinants and the second half of this section will deal with the factors that have affected the growth in consumer debt.

In any period, a consumer may spend more than his/her income by liquidating assets and/or by using credit. Individuals use credit to reduce the gap between desired consumption expenditure and current disposable income (less any savings that are deemed necessary). Consumer credit thus represents the shortfall of current disposable income (that is available for spending) over current consumption expenditure, and, as such, it reflects the individual's perception regarding his or her permanent income (i.e., expected income, which is the basis of the ability to repay debt). As indicated earlier, consumer credit is used to finance consumption expenditure. The demand for consumer credit is thus a derived demand. It arises from the demand for consumer goods and is closely related to expenditure on such goods.

Consumer credit is used mainly to finance purchases of consumer durables (which includes automobiles, furniture, appliances, televisions, etc.). Durable goods require a larger initial outlay of funds than non-durables and thus require a larger portion of disposable income and/or savings to finance the purchase. Consumer credit provides the advantage of allowing an individual to make payments (or save) for a good after he has purchased it. This puts the payment for a durable good roughly on a "pay as you use" basis, as the life of the good normally equals or exceeds the term of the debt used to purchase it.

Consumer durables differ from other goods in that they are purchased to yield a stream of services to the buyer for some time to come. In that sense, they become as much an investment as consumption. Individuals borrow to accumulate real assets when the return on such assets exceeds cost of the debt. One will note that the higher nominal returns on financial assets are taxable, but the (implicit) returns on consumer durables are not. In a study devoted to measuring rates of return on consumer durables to Canadian consumers, Poapst and Waters conclude: "Yields of the magnitude shown. . . indicate a rational basis for borrowing. Most of the yields exceed the cost of capital to the household, and many exceed it by a wide margin, even when high-cost installment loans are used"⁽³⁾. This analysis did not directly take into account (i) the intangible values such as the convenience and independence associated with durables that also contribute to an individual's overall utility, and (ii) the fact that buyers are able to enjoy such goods sooner by making use of consumer credit. All of this provides a strong motivation for borrowing to finance consumer durable purchases.

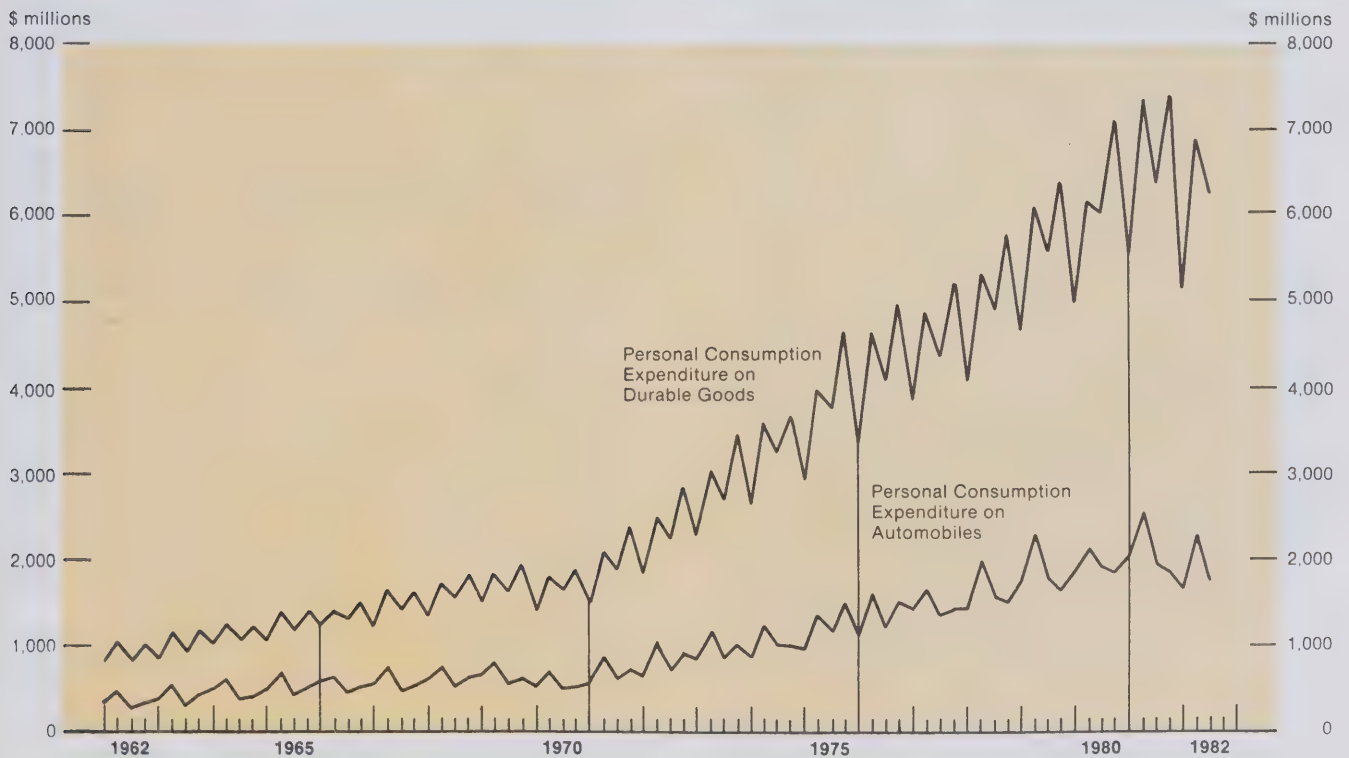

The close relationship between consumer credit flows and consumer expenditure on durable goods is illustrated in Figure V. Virtually, all of the turning points coincide in the two series. There is also a similar degree of association between consumer credit and the automobile component of durable goods expenditure. There is a good deal of seasonality in each of these series. It appears, however, that consumer credit is more volatile than consumer expenditure. This is most apparent in 1981-82, when consumer credit flows took an unprecedented plunge with principal repayments exceeding any new borrowings by a wide margin (net flow of minus \$645.0 million).

One would expect that the demand for consumer credit, as with the demand for any other product, is a function of price. In this case, the price of consumer credit is the actual interest rate charged on such credit, and we would therefore expect an inverse relationship between this rate and the quantity of consumer credit demanded. Some observers, however, believe that consumer credit demand is not very sensitive to finance rates charged on consumer loans. As Evans states "consumers are generally assumed to be notoriously interest-inelastic"⁽⁴⁾. If the recent data are examined, it can be seen that there is some justification for believing that the demand for consumer credit is relatively interest-inelastic. Despite the historically high nominal and real interest rates that emerged in 1979, the upward trend in the flow of consumer credit did not show a major reversal until mid-1981, the beginning of the recent recession (see Figure V). One can probably attribute any insensitivity to interest rates to three factors: (i) that consumer credit is short-term debt, and thus the total interest charge on a loan may not be that severe; (ii) that there is a small but growing portion of debt (namely credit card debt) that is repaid at little or no interest cost; and (iii) if such interest cost does become a burden, the term of the debt can be lengthened to make it more manageable.

Consumer credit and its relationship to the business cycle was examined in some detail by Haberler⁽⁵⁾. He indicated that as incomes rise in a period of economic expansion, the amount of consumer credit demanded rises, as individuals are easily induced to increase their spending in excess of their current disposable income; conversely, outstanding personal debt falls in a recession as repayments are on the rise relative to new borrowings. It seems likely that consumer expenditure on durables and non-necessities along with any related household borrowing would increase during boom periods when unemployment is falling, and fall off in bad economic times with unemployment and uncertainty increasing.

There are a number of reasons for the growth in consumer credit over the last two decades. Expenditure on durable goods which increased strongly in the 1950's and carried on into the 1960's and 1970's was a factor in the growth of consumer credit. Expenditure on durables as a proportion of total

Figure V
Flow of Consumer Credit (unadjusted for seasonal variation) versus Personal Consumption Expenditure on Durable Goods (unadjusted for seasonal variation) and Personal Consumption Expenditure on Automobiles (unadjusted for seasonal variation)

Source: Financial Flow Accounts and National Income and Expenditure Accounts

consumption expenditure reached a high of 14.4% in 1965. This surge in expenditure on durable goods (see Figure III) was mainly the result of pent-up postwar consumer demand, and it coincided with (i) innovations in the automobile industry (ii) the mass production of convenience and entertainment-oriented durables, and (iii) the two decades of stability and prosperity beginning in 1953. Expenditure on durables as a proportion of total consumption expenditure peaked at 16.3% in 1973 and remained in this range until 1976.

Underlying the increase in the demand for durable goods and the growth in consumer credit were marked increases in real personal disposable income. The compounded annual growth rate of real personal disposable income per capita was 4.5% from 1962 to 1976 as contrasted with 1.3% over the period 1947 to 1961. Growth in this aggregate has slowed considerably with an annual compounded growth rate of 1.9% over the period 1976 to 1981.

The emergence and entrenchment of inflation in the 1970's may have further encouraged the use of consumer credit. During most of the severe inflation of the 1970's, real interest rates (i.e., interest rates adjusted for inflation) were quite low, making debt more attractive.

One of the most important factors in fostering the growth of consumer credit was the evolution of new attitudes regarding credit purchases by the suppliers of consumer credit, and, as a result, acceptance by the general public of credit as a means of acquiring goods. In the past, debt was viewed as imprudent. However, as more consumer credit became available and consumer demand increased, attitudes inevitably changed. Increasing security of income was probably an important element in changing public attitudes towards debt. The last twenty years have witnessed the development of unemployment insurance and accident and health insurance plans.

A U.S. survey study that examined, among other issues, the question of personal attitudes towards debt concluded: "Of the factors in addition to income studied in this volume, attitudes toward borrowing are clearly the most important. . . . The strength of the correlation between attitudes and the use of installment debt, coupled with (1) the marked change in attitudes toward installment borrowing between 1959 and 1967, and (2) the substantial rate of growth of outstanding consumer installment debt over that period, all seem to indicate that attitudes toward installment debt should be given careful consideration in predicting future movements in the use of installment debt."⁽⁶⁾ A similar pattern undoubtedly exists in Canada.

The last twenty years was a period of considerable expansion and change in the financial sector. New types of credit were introduced and there was an easing of arrangements by which credit is obtained, reflecting in part the changing attitudes of the suppliers of consumer credit. One notable change, important as an indicator to the public of the trend to easy credit, was the introduction and ready acceptance of bank

credit cards (Visa 1968, Mastercard 1973). In terms of totals, the percentage of credit outstanding at any time on bank credit cards was thought to be quite small, but according to available data since the implementation of the new Bank Act, balances on bank credit cards represent about 7.5% of the total consumer credit outstanding at the end of 1981.

An important demographic factor contributing to the growth in the demand for durables and hence to the growth in consumer credit has been the increase in the number of households over the last twenty years resulting from the postwar baby boom. A survey by Statistics Canada in 1970 showed that consumer debt declines over a family's lifecycle⁽⁷⁾. Major expenditures on durable goods occur early in adulthood (ages 20-30), coinciding with household formation, childbearing and homebuying, and hence also coinciding with the bulk of the purchases of major appliances, household furnishings and possibly the first automobile. Most of the baby boom generation reached adulthood over the period from 1965 to 1979. As well, sociological changes have resulted in a trend to small two-earner families which has dramatically increased buying power per household.

More recent evidence indicates that the median age of the population has risen from 25.4 years in 1966 to 29.6 years in 1981. In addition, the proportion of married persons declined most in adults aged 20-29 years from 1976 to 1981. These demographic trends point to an eventual slowing or reversal in the trend of consumer credit demand. However, the possibility of eventual saturation in consumer durables may be partly offset by a faster turnover of durables (enhanced by rapid technological changes). In addition, consumer credit is so widespread that there seems to be an increasing use of such credit for expenditures on non-durable goods and services.

The goods that are traditionally related to consumer credit are durables such as automobiles and appliances. Items in non-durable expenditure that are also purchased with credit are (i) goods such as clothing and jewellery and (ii) services such as various forms of entertainment and vacations. Increased availability has promoted the use of credit in financing a wider range of consumer goods and services. For example, it is likely that vacation spending, particularly increases in international travel (because of the high costs involved), has had some impact on consumer credit. Travel expenditure abroad by Canadians increased rapidly in the late 1960's and in the 1970's, to the extent that there has been a deficit on Travel Account in the Balance of Payments (i.e. receipts from non-residents less payments by Canadians) since 1968 that has grown sharply since 1975⁽⁸⁾. Therefore, despite recent changes in personal consumption expenditure (away from durable goods) a growing use of credit for other purposes appears to have maintained an increasing trend in consumer credit outstanding as a proportion of personal disposable income, 1980 and 1981 excluded (see Figure III)⁽⁹⁾.

An Empirical Analysis

This section will develop and test a single-equation model of the demand for consumer credit (as represented by consumer credit flows), which incorporates some of the determinants presented in the previous section. This equation should help to explain the movements in consumer credit, and it will provide an empirical basis for the relationship between consumer credit and expenditure flows.

Most studies of the demand for durable goods explain expenditure on durables (CD) as a function of disposable income (YD) and relative prices (PR). Other determinants include variables designed to capture consumer attitudes, supply shortages and credit conditions.

$$CD = f(YD, PR, \dots)$$

There is a general consensus that consumer credit is an important element in the purchase of durable goods, "... the consumer may draw either on liquid assets or easily available consumer credit for assistance in financing his purchases. Of the two, available evidence indicates that credit availability is by far the most important determinant."⁽¹⁰⁾ It is assumed that the actual flow of consumer credit in any period is closely related to the flow of expenditure on durables over that period, and perhaps also to the cost of credit or interest rates (RL).

$$CR = g(CD, RL)$$

Though there is a strong correlation between consumer credit flows (CR) and expenditure on durable goods, there have been a number of periods where the changes in CR have been significantly different from the corresponding changes in expenditure on durables; upon closer inspection, it is observed that the changes in consumer credit flows are more closely linked to increases and decreases in the automobile expenditure component of durable goods. Consumer credit demand should be more sensitive to expenditure on automobiles (CA), than to expenditure on other durables (CO), as (i) a large portion of most car purchases is credit financed and (ii) CA is the largest single component of consumer expenditure on durable goods.

It is assumed that the demand for consumer credit, as represented by the net flow of consumer credit, is (i) an increasing function of a weighted measure of the two classes of consumption expenditure on durables (CD'), and (ii) a decreasing function of the cost of credit or interest rates (RL)⁽¹¹⁾. This basic relationship can be written as follows:

$$CR = a_0 + a_1 * CD' + a_2 * RL$$

CR is the quarterly flow recorded in category 3321, sector I and II, in the Financial Flow Accounts. CD' is

defined as follows: $CD' = 0.20 * CO + CA$. The weighting of CO and CA used in calculating CD' is somewhat arbitrary, but it has been done in such a way so as to more closely reflect the association of expenditure flows to consumer credit flows. Expenditure data used are raw (i.e., not seasonally adjusted) and in current dollars, in order to correspond with financial flows data. The interest rate chosen is that on prime business loans, as it is believed to be indicative of the general level of short-term rates, given that a satisfactory series for consumer credit is not available.

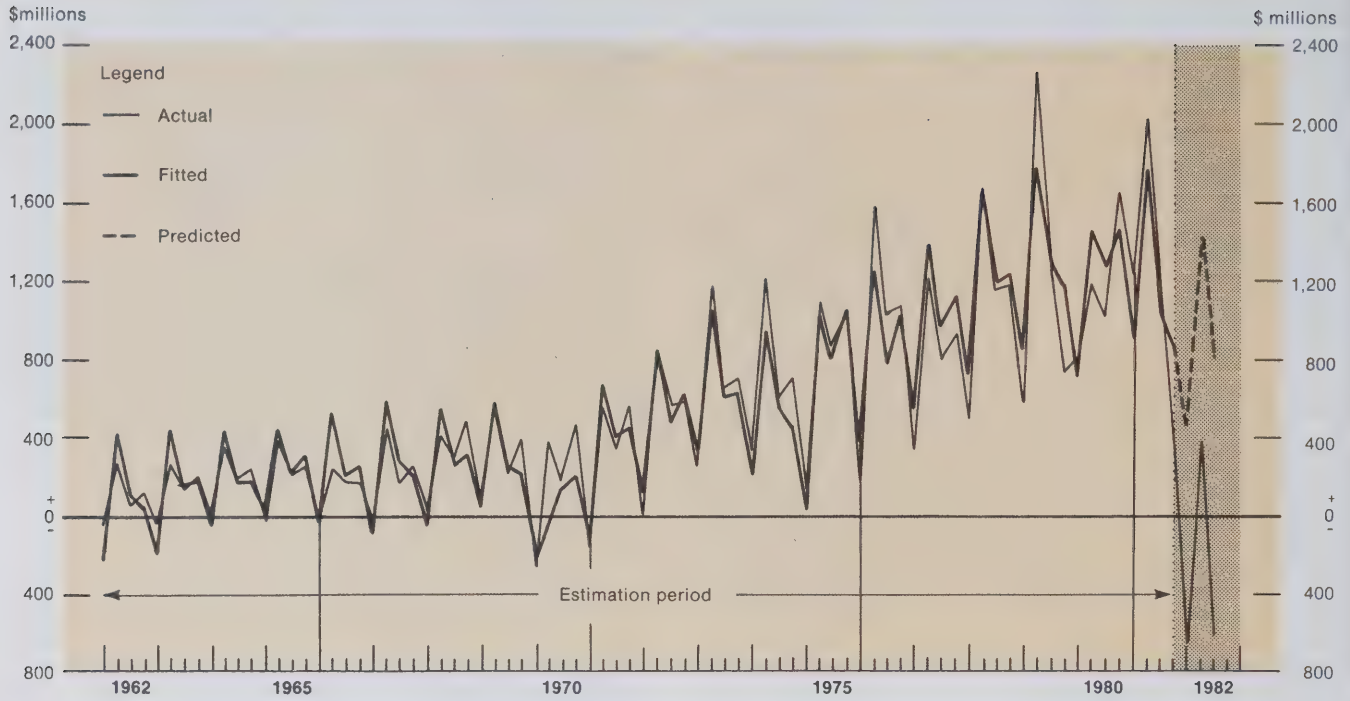

Seasonal and cyclical effects are also relevant. There is a fairly pronounced seasonal pattern to CR, due mainly to strong seasonality in many of the components of CD, and, as a result, the above specification is modified to include seasonal dummy variables. The explanatory power of this equation falls when extended to the most recent periods, because the effect of the severe cyclical downturn is not adequately captured in the specification. Therefore, a final variable, the unemployment rate (often used in consumption functions for durables) in first-difference form is included. It is expected to have a negative effect on CR, as sharp increases in the unemployment rate will tend to dampen consumer expenditure and discourage to a greater extent such expenditure that might be financed with credit.

An equation based on the above variables is estimated from 1962 Q1 to 1981 Q4, and the results are presented below with t-statistics in parentheses⁽¹²⁾. All of the estimated coefficients on the explanatory variables have the expected signs and are significant at the 5% level. As a further test, the equation is used to track the actual flows of consumer credit beyond the estimation period. The results of this experiment are reasonably good, considering the extreme volatility of the flows in the first two quarters of 1982. Actual, fitted and predicted values are shown in Figure VI.

$$\begin{aligned}
 CR = & -236.33 + 476.24 * D2 + 336.57 * D3 + 273.31 * D4 \\
 & (-3.39) \quad (8.09) \quad (6.06) \quad (4.87) \\
 & -50.49 * RL(-1) + 0.69 * CD' - 125.10 * UR \\
 & (-4.11) \quad (13.88) \quad (-1.90) \\
 R^2 = & 0.90 \quad \quad \quad DW = 1.76
 \end{aligned}$$

The results support the hypothesis that the flow of consumer credit is primarily related to purchases of consumer durables. There also seems to be both a strong seasonal pattern and a cyclical characteristic to consumer credit demand. The estimates also indicate that the demand for consumer credit is inversely related to the cost of such credit (RL proved to be most significant with a one period lag). The interest rate elasticity of consumer credit flows based on the estimated equation is -0.75 ⁽¹³⁾.

Figure VI
Flow of Consumer Credit: Actual, Fitted and Predicted Values

Source: Financial Flow Accounts

This study has focussed on the demand for consumer credit. Some important questions still remain to be answered regarding the long-run implications of consumer credit demand. There is the question of whether credit actually increases expenditure or merely shifts the timing of such expenditure. Does credit promote growth by encouraging individuals to make

purchases that they might put off or otherwise not make, or does the debt burden dampen future expenditure? It would also be interesting to examine the impact credit might have had on the automobile industry and on other industries, and hence on employment in the economy. These matters lie beyond the scope of this article.¹⁴

- (8) *Quarterly Estimates of the Canadian Balance of International Payments*, Balance of Payments Division, (Catalogue 67-001), Table 1.
- (9) The possibility even exists that the nature of consumer credit demand has changed so drastically (to increasingly finance the

demand for other goods and services) that it is stronger than it appears, but very short-term debt on credit cards and the like would not necessarily affect the level of consumer debt and thus would not be reflected on the charts.

(10) Michael K. Evans, page 152.

(11) While it is true that consumer credit is used to finance other purchases, it is assumed here that spending on durable goods account for most of the demand for such credit. As a result, this is the only expenditure series that is used in the interest of keeping the number of explanatory variables down to those that are expected to contribute a significant independent explanation of movements in consumer credit.

(12) T-statistics indicate the significance of the coefficients; a t-statistic is the ratio of the estimated coefficient to its standard error, and a general rule of thumb is that a t-statistic near or greater than 2 implies significance. The R^2 , which is the proportion of variation in the dependent variable explained by the independent variable(s), provides a measure of the overall goodness of fit of the equation.

(13) Elasticity is a measure of the responsiveness of one variable to another (causal) variable; more specifically, it is the percentage change in a dependent variable due to a one percent change in an independent variable. It is calculated here as the mean of $RL(-1)$ divided by the mean of CR times the estimated coefficient on $RL(-1)$.

(14) Some of these issues are to be discussed in a forthcoming article to be published in *Current Economic Analysis* (Catalogue 13-004).

 File EACONV81 Enumeration Area Conversion File, 1976-1981 with
 This file lists "geographically equivalent" 1976 and 1981 Census of Canada enumeration areas (EAs) by province and has been prepared to aid users in the comparison of 1976 and 1981 Census data at the EA level.

The 1981 "Geography Tape File" assigns each collection unit (namely enumeration areas) to all higher geographic levels by code and name for Canada. It includes EA centroids (in U.T.M., Lambert and latitude, longitude co-ordinates), the standard geographic codes, the population and household counts. Tape only.

The "Land Area Files", 1976 and 1981 population, as well as the corresponding geographic codes:
 Four "Land Area Files" are available at the following geographic levels:

1. Census Subdivision (CSD)
2. Census Division (CD)
3. Census Tract (CT)
4. Provincial Census Tract (PCT)

Land area refers to area measurement in square kilometres and excludes, whenever feasible, large bodies of water.

The above mentioned files are rounded for confidentiality.

Each complete tape file will be available at a cost of \$150.00. A charge of \$75.00 will apply to any file split on one region or province.

CARTLIBs

CARTLIBs are digital cartographic libraries of the boundaries and related features of various geostatistical areas, stored on magnetic tape files for use by computer mapping programmes. One type of tape file defines the boundaries of these areas, and another acts as an index for the boundary files and lists additional information for each area, such as land area, population, geographic codes, names, and centroids.

The 1981 CT CARTLIB is available on tape only at a cost of \$500.00. A charge of \$150.00 will apply to the file split on one region or province.

1981 Census of Agriculture

The 1981 Census of Agriculture file is available through CANSIM.

The file contains a record for each area in the following sequence:

Canada
Province
Agriculture Region
Census Division
Census Consolidated Sub-Divisions

There are 68 tables per record. The following is a brief summerization of the type of tables available:

- Farm Operators
- Type of Organization
- Farm Size
- Crops & Speciality Crops
- Fruits
- Vegetables
- Use of Land
- Improved Land
- Forage Seed

- Fertilizer Use
- Spraying, Dusting, Irrigation
- Livestock and Poultry
- Machinery
- Labour
- Forest and Maple Products
- Selected Expenditures
- Farm Sales
- Off-Farm Work
- Product Type (Sales)
- Farm Capital

Each tape file will be available at a cost of \$250.00.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting.

⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures. Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1970 standard industrial classification (million dollars)

Annual average and month	Total inventories owned	Non-durables	Durables	Foods and beverages	Tobacco products	Rubber	Leather	Textile	Knitting mills	Clothing	Wood

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric. Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Exports by Commodities (65-004), Imports by Commodities (65-007), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)

Canadian Statistical Review

Data in this publication were retrieved from CANSIM[®] (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field
- R.E. Drover — Director, Business, Provincial and
Municipal Relations Division
- B.J. Lynch — Director General, Business Statistics
- R. Platek — Director, Methodology Division
- M. Podehl — Director, CANSIM Division
- G.J. Brackstone — Director General, Methods
Development Branch
- A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises Division

- L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census
- P.N. Triandafillou — Director, Industry Product Division
- J.S. Wells — Director General, System of National
Accounts and Analysis Branch
- D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 4, Table 7: Help Wanted Index

These series have changed with this issue from a quarterly survey to a monthly survey and the official time base has been converted from 1969 = 100 to 1981 = 100. All data is available historically from January 1962 under the new CANSIM identifiers listed in the table.

Section 5, Table 2: Consumer Price Indexes

As previously announced, effective with the release of the January 1983 index, the official time base for the

Consumer Price Index has been converted from 1971 = 100 to 1981 = 100. Accordingly, all Consumer Price Index series which had a time base period prior to 1981 have been converted to 1981 = 100. Rebasing is strictly an arithmetic procedure which neither alters historical nor current percentage changes, other than for minimal differences attributable to rounding. As a convenience to users, Statistics Canada will continue to publish the all-items indexes for Canada and for the 15 cities for which CPIs are produced on a 1971 = 100 time base (1974 = 100 for Charlottetown/Summerside). This rebasing does not affect the weighting used in the CPI which continues to reflect 1978 expenditure patterns.

Gross National Product

Fourth Quarter 1982 Advance Information

Preliminary estimates show that Gross National Product at market prices rose 2.0% in the fourth quarter of 1982 to a level of \$356.7 billion, seasonally adjusted at annual rates. In real terms, that is, after allowing for the change in the overall implicit price index, GNP fell 1.1% and ended the year 7.5% below its peak in the second quarter of 1981.

The quarterly decline was the sixth in a row, and while its magnitude was about as large as in the preceding two quarters, its composition was more consistent with the growing belief that the recession, which began in the summer of 1981, is nearly over. Final domestic demand, (the sum of consumer spending, government spending and business fixed investment) rose in real terms for the first time since the second quarter of 1981, and while the increase was a modest 0.7%, sustained growth here is important to economic recovery. The decline in the quarter was mainly due to a fall in real net exports, as both exports and imports declined very sharply, and to a faster rate of inventory disinvestment, particularly among durable goods, where manufacturing stock-to-sales ratios have been persistently high. Monthly industry output data to be released later this week will likely suggest that domestic production strengthened during the latter part of the fourth quarter. At the same time, however, personal disposable income is growing slowly and the outlook for business fixed investment in plant and equipment remains very weak.

Real personal expenditure was virtually unchanged in the fourth quarter, with services up 1.0% and goods down 0.3%. Within goods, the durables component rose a moderately strong 2.1%, due largely to higher expenditure on furniture and household appliances, which may be associated with lower interest rates and the upsurge of activity in the housing market. Purchases of new and used automobiles also rose. Weakness was widespread among semi- and non-durable goods; there were declines in sales of

clothing and footwear and home-heating fuels and gasoline.

Constant dollar expenditure on housing rose 10.4% in the fourth quarter but this was almost exclusively due to increased real estate commissions earned in resale markets which reflected lower interest rates and government home ownership stimulation programs. Work-put-in-place was little changed from the previous quarter. Housing starts rose strongly throughout the quarter, but most of this activity will not be reflected in the data until the first quarter of 1983.

Business expenditure on plant and equipment in real terms was little changed during the quarter, following three quarters of declines. This left the level 16.7% below the fourth quarter of 1981. Expenditure on machinery and equipment was down fractionally, but the post-strike recovery in activity led to a marginal increase in non-residential construction.

Real stocks of non-farm business inventories were reduced by \$4.4 billion in the fourth quarter as final domestic demand rose slightly and production continued to decline, particularly early in the quarter. Approximately three-quarters of the drop in inventories occurred in durable goods industries and was widespread at all stages of fabrication in manufacturing and in wholesale and retail trade. Stocks of automobiles dropped sharply at the retail level in line with curtailed production.

Merchandise exports fell 10.9% in volume and merchandise imports declined 10.8%. Real net exports fell, but the terms of trade moved sharply in Canada's favour, so the current dollar surplus on trade in goods and services¹ rose slightly to \$3.1 billion in the fourth quarter. The reduction in real exports and imports was basically in end products, largely in motor vehicles and motor vehicle parts.

¹ These estimates will be presented in greater detail in the Balance of Payments information bulletin to be released next week.

The usual measure of overall prices - the implicit price index for GNE - has been distorted in the quarter by weight-shift effects among exports and imports. If these effects are discounted overall prices appear to have risen about 2%, compared to the GNE implicit price index which rose 3.1%. A more representative picture of price movements in the quarter is provided by examining the other components of GNE. For example, the implicit price index for consumer goods and services rose 2.0%, down from 2.6% in the third quarter, and residential construction prices declined fractionally following a 2.0% drop in the third.

Wages, salaries and supplementary labour income rose 1.3% in the quarter, and were only 3.6% above the level a year earlier. A termination of strike activity in the construction industry helped to boost labour income following the small decline last quarter, although the rate of decline of employment also slowed during the quarter. Average hourly earnings continued to decelerate rapidly, notably in the manufacturing sector.

Corporate profits before taxes jumped 17.5% in the quarter. Strong gains in the financial and trade industries led the increase, more than offsetting a large decline in manufacturing.

Total government expenditures, excluding inter-governmental transfers, rose less rapidly in the fourth quarter than in the third due to a slower rate of growth in transfer payments to persons and interest on the public debt and a large drop in the oil import subsidy. Total revenues declined marginally, reflecting decreases in personal income taxes and petroleum-related indirect taxes and a slowdown in investment income growth. As a result, the total government sector deficit, on a national accounts basis, rose to a level of \$27.4 billion.

1982 Annual

Gross National Product at market prices rose 5.3% in 1982, to a level of \$348.9 billion. This increase comprised a rise of 10.6% in overall prices, and a drop of 4.8% in the volume of goods and services produced. The fall in real GNP was the first for a calendar year since 1954 and the most pronounced annual decline since 1933.

Final domestic demand dropped 4.2% in volume, as consumers and businesses cut back outlays sharply in reaction to weak income flows and record interest rates. Consumer spending slumped by 2.5% following five years of weak growth; residential construction fell 23.5%, and business investment in plant and equipment declined by 11.5%. The largest declines in domestic demand occurred in the most income- and interest rate-sensitive components, notably consumer purchases of durable goods and homes, and business outlays for machinery and equipment.

Total non-farm business inventories declined by \$3.3 billion in volume in 1982, equivalent to more than half the drop in GNP. High rates of liquidation were

recorded through the year in all major industry groups. The largest declines occurred in the motor vehicle and business investment-related industries, although stocks of finished goods in the manufacturing sector did not begin to decline rapidly until the second half of the year.

Business investment in plant and equipment slumped by 11.5% in volume in 1982, a sharp reversal from the robust growth between 1978 and 1981. There were reduced outlays for machinery and equipment in a wide range of industries, down 16.4% overall, and for non-residential construction which declined less rapidly, off 6.0%, in response to the drop in capacity utilization rates, profitability and corporate liquidity.

The historical deficit in trade in goods and services was converted in 1982 to a surplus of \$1.2 billion. All of the improvement originated in a \$10.4 billion increase in the merchandise trade surplus to a record level of \$17.7 billion. Merchandise exports rose 0.3% in value while merchandise imports fell 13.2%. Within exports, shipments of end products and agricultural commodities rose, offsetting lower exports of a wide range of crude and fabricated materials. The drop in merchandise imports was very widespread and reduced import penetration in real terms, as measured by its share of GNE, from 19.2% in 1981 to 17.2% in 1982.

The growth of wages, salaries and supplementary labour income slowed markedly from 13.9% in 1981 to 6.9% in 1982, the lowest rate of increase since 1963. Steep cutbacks in employment, particularly in the goods-producing industries accounted for most of the slowdown. Average hourly earnings also began to subside rapidly in the second half of the year, and labour income in the goods-producing industries fell marginally in 1982.

A sharp 22.9% increase in government transfer payments to persons, notably from unemployment insurance and welfare programs, helped to brake the slowdown in personal income growth to 9.7%. With nominal personal spending up only 7.8%, the personal savings rate rose from 12.4% in 1981 to 13.7% in 1982.

Corporation profits before taxes declined 33.3% in 1982, returning to levels not recorded since 1977. The sharp drop in corporation profits, together with the weakness in labour and farm income, restrained the growth of total factor incomes to 3.8% the slowest rate of increase since 1961. The only component of net national income to record substantial growth in 1982 was interest and miscellaneous investment income, up by 10.2%, reflecting the high yield that existed throughout the year on most interest-paying financial instruments.

Total government expenditure grew by 17.1%, about the same rate as the previous year, due to a doubling of unemployment insurance payments and a sharp increase in interest on the public debt. Total government revenue rose by 6.6%, a sharp deceleration from the 18.8% growth a year earlier.

This slow-down was largely caused by lower income tax growth as well as a considerable weakness in all categories of indirect taxes. The government sector

deficit, on a national accounts basis, rose sharply to a record level of \$18.6 billion.

In 1982, Gross National Product at market prices increased 5.3% to a level of \$348.9 billion. In real terms GNP decreased 4.8%.

Gross National Product at market prices seasonally adjusted at annual rates rose to \$356.7 billion in the fourth quarter of 1982, an increase of 2.0%. After allowing for price changes, GNP declined 1.1%.

The growth of wages, salaries and supplementary labour income and military pay and allowances slowed markedly from 13.9% in 1981 to 6.9% in 1982. Corporation profits before taxes declined 33.3% in 1982, the lowest level recorded since 1977. Interest and miscellaneous investment income increased 10.2% following a strong 21.6% rise in 1981.

Note: All quarterly data adjusted for seasonal variation and at annual rates

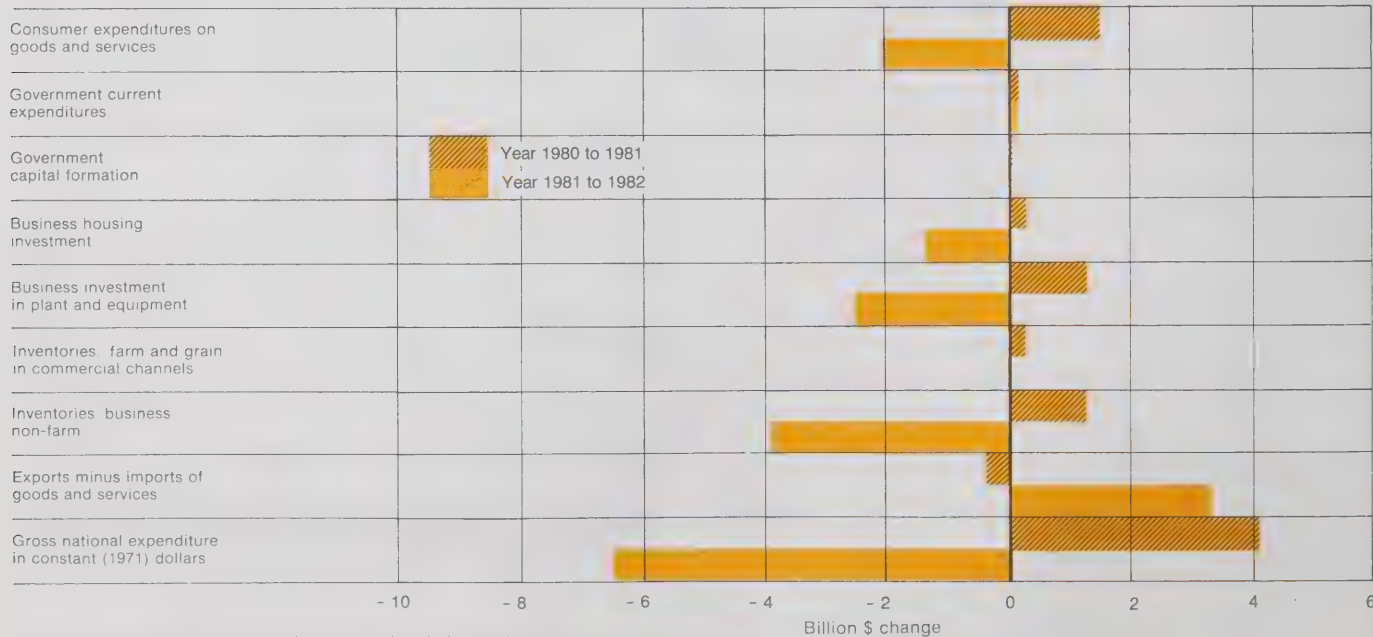

In 1982, exports of goods and services rose by 0.9% while imports fell 6.8%. The historical deficit in trade in goods and services was converted to a surplus of \$1.2 billion; all of the improvement originated in a record merchandise trade surplus.

In the fourth quarter of 1982, exports of goods and services decreased 7.7% and imports fell 6.8%. The balance of trade in goods and services increased by \$264 million. This is the third consecutive quarter that a surplus was registered.

Real consumer expenditure on goods and services, investment in residential construction and in business plant and equipment were the major components which caused a 4.2% decline in final domestic demand in 1982. Total non-farm business inventories declined by \$3.3 billion in volume in the year.

Note: All quarterly data adjusted for seasonal variation and at annual rates

Observations

Perspectives on Health

Introduction

Health and health care are key aspects of social well-being. Now, for the first time, Statistics Canada offers a publication, *Perspectives on Health*, that provides a complete picture of the health status of Canadians and the health care system in Canada.

This article presents some of the major highlights included in *Perspectives on Health*. These, and the full volume itself, are organized around five central themes:

- population demographics
- determinants of health status
- health status indicators
- utilization of health services
- the health care system.

Selected Highlights

Population

For the next few decades the planning of health resources may be affected as much or more by changes in the population age structure as by changes in the size of total population. For example, in 1951 persons aged 65 and over accounted for less than 8% of the population and about 32% of total hospital patient-days, but in 2031 the proportions could be 20% of the population and 60% of hospital patient-days.

Determinants of Health Status

There were an estimated 635,000 alcoholics in 1978, or one adult drinker in 20; this total has more than doubled since 1965. An estimated 1.4 million persons, or one adult drinker in 10, now suffer from an alcohol-related handicap.

In 1978, alcohol consumption was the direct cause of 2,520 deaths and the indirect cause of 5,668 others (traffic accidents, falls, etc.). Furthermore, there is evidence that alcohol played a role in 10,142 other deaths. Thus, almost 11% of all deaths in Canada in 1978 have been linked with alcohol consumption.

In Canada, average adult consumption of cigarettes is leveling off among males while continuing to increase among females. Whereas in 1965, amongst 15-19 year

olds, male smokers outnumbered female smokers two to one, today there are equal proportions of smokers from both sexes.

Three of 10 adults both smoke and drink. Evidence suggests that about 600,000 people who smoke at least 23 cigarettes a day and drink an alcoholic beverage at least 14 times per week are exposed to serious health risks.

After diseases of the circulatory system and tumors, accidents rank third among causes of death in Canada.

Almost 40% of years of life lost between the 1st and 70th birthdays are a result of accidents and violence. Moreover, 40% of these years lost are due to traffic-accidents.

Immunization is an effective means of preventing many serious illnesses, yet more than 4.5 million Canadians have not been immunized against and thus are susceptible to polio.

For women the Pap smear and breast self-examination are two accepted cancer-preventive measures. Yet only 42% reported having a Pap smear during 1977-1978, and 21% never had one; 60% conducted breast self-examinations, but only 21% on a monthly basis.

Health Status

Apart from accidents and violent deaths, the major causes of death are related almost exclusively to the degenerative process, such as heart disease, cancer, stroke and respiratory diseases.

The leading causes of hospitalization are heart disease, stroke, accidents, mental disorders and respiratory diseases. Except for mental disorders, these are also leading causes of death.

On a day to day basis, the problems with which Canadians live are quite different from those which result in death. In order of prevalence these conditions are arthritis and rheumatism, disorders of back, limbs and joints, hay fever and other allergies, skin allergies

and skin disorders, and dental trouble. Not surprisingly, the proportion of the population with at least one health problem increases with age: over 85% of the elderly (65 years old and more) report at least one problem.

With respect to long term disability, 2% of the population or nearly half a million Canadians, are so severely disabled that they cannot carry out a major activity such as work, school or housework. Of those, over 300,000 are from 15 to 64 years old.

On an average, working persons miss slightly more than four days a year because of ill health. For Canada as a whole, this amounts to 37 million working days a year. By comparison, the total number of days lost because of strikes and lockouts in 1978 was 7.5 million.

The five most frequently reported communicable diseases in Canada are venereal diseases, measles, salmonella, tuberculosis and hepatitis.

Utilization of Health Services

Length of stay in hospital increases significantly by age. For patients up to 44 years of age, stays in hospital averaged about one week. Patients 45 to 64 years of age stayed in hospital an average of about 12 days, while the elderly spent nearly 25 days in hospital per stay.

During 1978-1979 Canadians made over 94 million visits to physicians' offices, an average of four visits each. The rate of visits to physicians was considerably higher in Quebec and Ontario than in other regions in the country.

People visit dentists less often than physicians. The frequency of consultations with a dentist during 1978-1979 was lowest in the Atlantic provinces where slightly more than 41% of the population reported one

or more visits. The highest rate of utilization of dental services was in Ontario where just over 55% indicated one or more visits.

Health Care System

Between 1968-1978, the number of physicians in Canada increased 50% while the population grew about 13%.

Provincial distributions of physicians, including interns and residents, differed significantly in 1978. In each province the supply of physicians was unevenly distributed, with the highest doctor/population ratios in the most populated urban centres.

In the professional fields of medicine and dentistry, the proportion of women is increasing. In medicine, the percentage of women graduates in 1968 was about 11%, but in 1978 it was 30%. In dentistry, women accounted for slightly more than 7% of dental graduates in Canada in 1974; four years later the proportion had more than doubled to over 17%.

Total health care expenditures in Canada amounted to well-over \$18 billion in 1979, an average of \$785 per person. As a proportion of Gross National Product, health care expenditures remained relatively stable during the 1970's being 7.2% in 1970 and 7.1% in 1979.

In 1972 the bottom 20% of income earners in Canada spent an average of \$106 or 2.8% of their income on health care; while the top 20% of income earners spent more than four times as much (\$455), it was still only 2.3% of their income. In 1978 the lowest income families spent 2.1% of their income on health, compared with 1.7% spent by those earning at the highest levels.

Section 2 - Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

Table 1: Population,¹ by province (thousands)

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.

²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting.

⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

Table 1.2: Gross national expenditure (millions of dollars)

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment. (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.
For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹"Beneficiaries" refer to the number of persons receiving \$1.00 or more in unemployment insurance benefit during a specific week each month. ²Annual figures are averages of 12 months. ³Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. ⁴Trainees on courses approved by Canada Employment and Immigration Commission.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service.

¹See footnote 1 and source in Table 10. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments ¹							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.
 Note: All series are subject to revision each year when more recent Census of Manufactures data become available.
 Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.
²Includes crude oil, condensate and pentanes plus.
³Gross new production by field less field flared and waste.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1977 and 1978 price indexes are subject to revision. ³1978 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵The major groups include additional components than the selected ones shown.

¹Column numbers refer to Tables 3 and 4, Section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

¹Column numbers refer to Tables 3 and 4, Section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

¹This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. ²Seasonally adjusted data for Saskatchewan is not available.

Source: Cheques Cashed (61-001), Statistics Canada.

¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. ²Total new settled-for ordinary sales in Canada.

³Total sales figure does not include sales for Northwest Territories. ⁴Under new or amended contracts.

¹This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. ²Beginning in December 1973, this category includes oil export tax. ³March includes supplementary payments arising from the closing of the accounts.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field
- R.E. Drover — Director, Business, Provincial and
Municipal Relations Division
- B.J. Lynch — Director General, Business Statistics
- R. Platek — Director, Methodology Division
- M. Podehl — Director, CANSIM Division
- G.J. Brackstone — Director General, Methods
Development Branch
- A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises
Division

L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census

P.N. Triandafillou — Director, Industry Product
Division

J.S. Wells — Director General, System of National
Accounts and Analysis Branch

D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 8, Table 10 — Domestic shipments of building materials by Canadian manufacturers.

The two series "Hardboard, Industrial treated and siding" (D340008) and "Hardboard, Prefinished wall or ceiling panels" (D340009) have been combined into one new series "Hardboard, All types" (D340033).

University Graduates and Jobs: Changes during the 1970s

— A Summary of Findings —

*W.G. Picot

Background

Over the past twenty years, interest in the employment experiences of graduates has been increasing.

The 1960s were a period of rapid expansion for postsecondary education. This growth was largely based on two theories; the theory of *human capital*, which views education as an economic investment for both individuals and society as a whole, and the principle of "*universal access*" which advocates general availability of postsecondary education.

By the 1970s, however, the economic value of some kinds of university education to individuals was questioned. Various studies¹ revealed a rapid increase in the supply of graduates, without a commensurate increase in demand. This resulted in a deterioration of their occupational status when compared with graduates of earlier periods and a drop in the economic value of higher education for individuals. This phenomenon was observed in most major industrialized countries. Nevertheless, university graduates were less likely to be unemployed than their contemporaries with less education.

More recent findings² suggest that the job market for graduates should improve in the 1980s, because the number of persons graduating is expected to decline by the second half of the decade. In fact, shortages in some occupations requiring a degree, such as engineering, computer science, and even teaching in the western provinces, have been forecast, albeit prior to the economic downturn in which the country now finds itself. These studies did not anticipate the current recession, so their conclusions are questionable as long as the demand for virtually all types of labour continues to be depressed.

Concerns about the availability and mix of the manpower supply are likely to persist in the 1980s however. Attention will continue to be focused on the

education system, the most important source of manpower.

Most studies examining the labour market experiences of graduates have ignored differences among fields of study, usually because the data were not available. A major strength of this work is that the industry and occupations of graduates from particular disciplines are described.

The latest national data to allow this kind of detailed analysis were collected in the 1970s. These data are available for two periods, and show the occupations and industries in which university graduates were employed two years after they received their degrees. The first sample consists of approximately 6,400 1969 graduates who were employed (full-time or part-time) in June 1971; the second consists of 15,000 1976 graduates who were employed (full-time or part-time)³ in June 1978. The former sample represented all Canadian university graduates, the latter included graduates from nine provinces only. Quebec did not participate, since it conducts its own follow-up surveys. However, statistical tests show that the occupational and industrial employment patterns of Quebec graduates are not significantly different from those of other Canadian graduates *in the same field of study*. Thus, the exclusion of Quebec in 1978 does not significantly affect the comparability of the 1971 and 1978 data.

Although the data are from the 1970s, the fact that they are from two periods seven years apart lends them an historical perspective. If a phenomenon was discovered in both of these periods, it may have formed part of a longer trend which warrants consideration.

This paper is a summary of a larger report of the same name. Readers wishing more detail on the topics discussed should refer to the full report.⁴

The paper consists of three sections. The first provides statistics on the occupations university graduates entered shortly after graduation, and changes in this

*W.G. Picot is a senior analyst, Research and Analysis Division, Social Statistics Field, Statistics Canada

between 1971 and 1978. Perhaps the more interesting story of changing employment patterns for graduates in the 1970s, however, is found in sections II and III. The second section describes the industries that hired "recent" graduates in 1971 and 1978. The third considers graduates in terms of their traditional dependency on the public sector for employment, and the effect on graduation patterns from 1970 to 1981 of the slowdown in public sector growth.

1. Occupations⁵ of Graduates

Teaching was by far the most important single source of employment for university graduates in the 1970s. In 1971, 42 per cent of all employed 1969 bachelor's graduates were teaching. With the overall decline in school enrolment during the 1970s, teaching opportunities decreased, and by 1978, the proportion of bachelor's graduates in teaching had fallen slightly to 37 per cent. At the master's level, the corresponding proportions were 31 per cent and 25 per cent, and the doctoral level, 54 per cent and 43 per cent. The proportions of graduates finding employment in other occupations early in their careers is shown in table 1.

Despite the decline in school enrolment, about the same proportion of graduates in the field of education found teaching jobs in both the early and late 1970s, earning salaries at or above average for all graduates. This may in part have been due to the introduction of the ruling in the early 1970s in some provinces that elementary school teachers have a university degree, which in essence expanded the labour market for university graduates. The proportion of bachelor's graduates becoming elementary teachers actually rose over the period surveyed (13 per cent to 18 per cent).

Since the requirement of a degree at the secondary level has existed for many years, there was no effect from academic upgrading on the employment patterns at that level. The proportion of graduates becoming secondary teachers fell considerably — from 25 per cent to 12 per cent. Overall, however, education graduates appeared to do better than average in the labour market, at least until the late 1970s, both in terms of salary and the ability to locate employment related to the education. It is not known if this situation continues today, but the circumstances that made it possible in the 1970s — i.e. academic upgrading —

have largely passed.

Throughout the 1970s, there continued to be a major difference in the types of occupations entered by male and female graduates. Women tended to accept positions in teaching, clerical work, the social sciences, and health, while men were apt to be in engineering, math, science, and management or management support occupations, as well as in teaching.

The relationship between field of study and occupation is also examined in detail in the full report. Some fields of study were strongly related to particular occupations; graduates of others entered a wide range of jobs.⁶ At the bachelor's level, graduates of professional fields, education, and engineering tended to work in directly related occupations. (See chart 1). An index measuring the degree of concentration of graduates from various fields in occupations is developed in the full report. It indicates whether graduates are concentrated in a very few occupations, or are dispersed over many. This index showed that graduates of the social and biological sciences displayed the weakest ties to specific occupations and were dispersed among many different types of jobs, many of them not requiring a university degree. Humanities graduates tended to be teachers, with approximately 45% of them becoming teachers two years after graduation.

With the rapid increases in the number of university graduates during the 1970s, a change in the types of jobs obtained by graduates from some fields of study has been documented in various studies.¹ To examine this issue, occupations were classified into two groups; those requiring at least two years of post-secondary education, and those requiring less. The method of classifying occupations was developed by researchers at the Ministry of State for Science and Technology while working on a manpower demand model.⁷ For *bachelors* graduates as a whole, the proportion entering jobs *not* requiring a post-secondary education two years after graduation rose from 21% in 1971 to 26% in 1978. At the *masters* level, the proportion remained constant at 15%, and at the doctoral level, it rose from 9% to 12%. There was, however, a wide variation by field of study as shown in Chart 2. The labour market appeared to weaken the most during the 1970s for biological science graduates, as the percent of these graduates in jobs *not* requiring post-secondary

Education rose from 27% in 1971 to 46% in 1978 at the bachelors level, from 9% to 30% at the masters level, and from 16% to 25% at the doctoral level.

2. Industries⁵ where University Graduates Found Employment

In examining the relationship between education and employment, the latter is typically characterized by occupation and income. Another important, though often overlooked, aspect of employment is the industrial sector in which graduates from particular disciplines are likely to find jobs. For example, is there a tendency for graduates in, say, the humanities to predominantly work in the public or private sector?

Aside from the obvious interest to students planning careers, such information can be important for other reasons. For example, if graduates of some disciplines are highly concentrated in a particular economic sector, their employment prospects are closely tied to the economic health of that sector alone. Graduates from fields that are utilized throughout the economy can more easily locate employment in an alternative sector if part of the economy is experiencing slow growth. As will be seen, this was an important consideration in this analysis.

During the 1970s, the education services sector of the economy was by far the principal employer of university graduates early in their career. In 1978, 41% of employed 1976 *bachelors* graduates were in the education sector, along with 44% of employed 1976 *master's* graduates and 57% of employed 1976 *doctoral* graduates. However, the ability of the education sector to absorb new graduates had declined during the 1970s, particularly at the doctoral level. The proportion of employed doctoral graduates in education two years after graduation fell from 68% in 1971 to 57% in 1976.

After education, public administration and health and welfare were the most important employment sectors. Proportions in those sectors rose somewhat during the 1970s, as shown in Table 2. Other significant industries of employment were services to business management (e.g., computing, engineering, law, accounting, advertising and scientific services, etc.), and manufacturing.

The three principal industries in which graduates worked in the 1970s have one thing in common — they are largely in the public sector. In this paper, industries are classified as *public* (non-commercial) and *commercial*: education, government administration, hospitals, and welfare services being public;⁸ all other industries being designated commercial. The latter includes what is commonly referred to as the private sector, plus public enterprises of a commercial nature, such as Air Canada, the CNR and other crown corporations.

By this definition, in 1978 the majority of employed 1976 graduates were working in the *public sector*: 60% of the bachelor's graduates, 70% of the master's graduates and 80% of the doctoral graduates. By comparison, just 25% of the labour force as a whole was employed in that sector in 1978 (see Chart 3).

It must be noted, however, that even though the majority of new graduates found *public sector* jobs in the late 1970s, the proportion working there declined during the decade, with a corresponding increase in the proportion working in the commercial sector. Among bachelor's graduates, the percent in the commercial sector rose from 31% in 1971 to 40% in 1978, for master's graduates, from 27% to 30%, and for doctoral graduates, from 11% to 20%. This change was probably in response to declining job opportunities in education. As will be seen later, it is likely that the proportion employed in the commercial sector has continued to increase, although to what extent is not known.

Thus, three basic observations can be made from Chart 3. First, university graduates are employed in the public sector to a far greater degree than workers in general. Second, the higher the level of education among graduates, the more likely they are to work in the public sector, and third, the proportion of graduates finding employment in that sector declined between 1971 and 1978, and probably thereafter for reasons given later.

To put these observations in some sort of perspective, a comparison was made using American data. It was found that the employment patterns in the two major economic sectors — public and commercial⁹ were significantly different in the US and Canada. In the United States, it was the commercial sector that provided the majority of jobs for *bachelor's* graduates, not the public sector as in Canada. Fifty-seven percent of 1977 American bachelor's graduates were employed in the *commercial* sector in 1978, compared to 40% of

Employment of the Labour Force and University Graduates in the Public and Commercial Sectors

Distribution of Employment in the Labour Force, 1978

Distribution of Employment of University Graduates, Two Years After Graduation

1976 Canadian graduates with bachelor's degrees. The differences by field of study were in some cases dramatic. For example, a surprising 71% of American humanities graduates found jobs in the commercial sector early in their careers, compared to only one-third of Canadian humanities graduates. At the *master's* level, about the same proportions were in the commercial sector in the USA and Canada — 32% and 30%, respectively. American data were not available for doctoral graduates.

The observations to this point have largely referred to university graduates *independent* of field of study. However, the data indicates there is a strong relationship between field of study and the likelihood of working in the commercial or public sector. For Canada, the major fields of study were classified according to the likelihood of graduates finding jobs in one of the two sectors. In the late 1970s, three-quarters of *bachelor's* graduates had majored in a field that placed the majority of its graduates in the public sector (what will be called *public-sector oriented fields*, including education, humanities, biological sciences, and social sciences excluding law and economics). Collectively, almost three-quarters of graduates from these fields were working in the public sector. Other fields placed the majority of their graduates in the commercial sector, including engineering, business/commerce, math/physical sciences, law and economics. Approximately one-quarter of all graduates were in this group in 1976 (referred to as the *commercial sector oriented fields*). Collectively, three-quarters of these graduates entered the commercial sector in 1978.

Evidence from both the 1971 and 1978 surveys suggests that throughout the 1970s, *bachelors* graduates of the "*public sector oriented*" fields were highly utilized in the public sector early in their careers, but *not* in the commercial sector. More specifically, graduates of these fields who were employed in the public sector found relatively high paying jobs that required post-secondary education. However, the one-quarter of the bachelors graduates of the same fields who were working in the commercial sector obtained relatively low-paying jobs that in the majority of cases did *not* require post-secondary education. Whether graduates in these jobs do in time move into better paying and more responsible positions is not known. *Bachelor's* graduates of "*commercial sector oriented*" fields, on the other hand, were likely to obtain jobs with relatively high salaries that required a degree, whether they worked in the commercial or public sector. Of course, these findings vary somewhat by field of study¹⁰.

At the *master's* level, only engineering and business graduates were employed in significant numbers in the commercial sector early in their careers. At the *doctoral* level, only engineering qualified as a "*commercial sector-oriented*" field of study. Doctoral graduates of all other fields were more likely to work in the public sector, with from 80% to 95% of them doing so.

There are differences between men and women in the likelihood of working in either of the major economic

sectors. This is largely because women are more likely to be in the "public sector oriented" fields of study than men. Fully three-quarters of 1976 female *bachelors* graduates were employed in the public sector in 1978, as compared to approximately one-half of male graduates. Although high, this represented a decline from 1971 when 85% of female and 60% of male 1969 bachelors graduates located jobs in the public sector.

3. Public Sector Growth and Changing Graduation Patterns

Since such a high proportion of graduates enter the public sector, job opportunities there deserve closer examination. Employment growth in the public sector declined during the 1970s. In the *education sector*, the number of teachers was increasing at an average annual rate of 3.4% during the years 1969-71. By the 1976-78 period, numbers were falling an average -0.3% annually, and the decline continued through the rest of the decade. The pattern in the *government sector*, the next largest employer of graduates, was much the same. The average annual rate of employment growth was 4.5% during 1969-71, 2.0% during 1976-78, and virtually zero during the 1978-80 period.

This slowed employment growth almost certainly affected employment opportunities for graduates, and probably caused the shift toward employment in the more rapidly growing commercial sector. It may also explain in part why so much attention was paid to "underemployment" among arts and science graduates in the 1970s, in contrast to the stronger labour market for graduates from engineering, business and professional fields, who rely more on the commercial sector for employment.

The increasing supply of graduates relative to demand and in particular the decline in job opportunities on the education and government sector, has prompted many to call for a reallocation of resources in the postsecondary system. One such group was the Task Force on Labour Market Developments in the 1980s¹¹. They advocate an expansion in engineering, technological training, and selected business programs, and a reduction in general arts and disciplines related to education and public administration. They further suggest that some funds be reallocated from the postsecondary system to training in the technologies and skilled trades.

Others, however, strongly believe that the commercial sector should accept more responsibility for training graduates and providing specific skills, particularly for graduates from what have been called here the public-sector oriented fields. It is argued by many, particularly educators, that the education received in many of these fields is intended to develop students' full intellectual potential, and to allow them to adapt to new roles and circumstances. It is further argued that while these may not be the qualities immediately sought by employers, they will serve the individual well through a lifetime of work and experience, thus also serving the employers' interest. It was shown earlier that during the

Table 3. Percent Change in Degrees Granted between 1976 and 1981 in Canada, by Field of Study

Bachelor's		— Per Cent —		Master's	Doctoral
Commercial-Sector Oriented Fields	+39	Education		+33	+27

Total	+ 2	Total		+12	+ 6

* Virtually all the increase between 1976 and 1981 in the category was due to an estimated 50 per cent increase in degrees granted in computer science. Degrees granted in mathematics and the physical sciences were at approximately the same level for both years.

** excluding economics and law.

1970s there was a low degree of both hiring and utilization of graduates from fields such as the humanities, biological and social sciences in the commercial sector, at least early in their careers. Given this, it might be asked if the commercial sector benefits as much as it could from the skills and knowledge imparted by the university, particularly at the masters and doctoral level.

Data on degrees granted suggest there has been a considerable response to labour market developments for graduates in the 1970s, and that it was in the direction recommended by the Employment and Immigration Task Force and others. *At the bachelors level*, the reaction was two-fold. First, there was a slowdown and then a decline in the number of university graduates in the 1970s. Following an average *annual* increase of 6% between 1970 and 1975, the growth in the number of bachelors degrees granted slowed to an average annual 3.4%, during the 1975 to 1978 period, and then declined an annual average - 1.7% between 1978 and 1981. (This, however, is likely to be shortlined, since university enrolments have been increasing rapidly since 1980, and the number of graduates will start rising again soon.)

Second, there was a movement away from what has been called the public-sector oriented fields (education, humanities, social and biological sciences). Chart 4 shows that between 1970 and 1976, the number of degrees granted in the two groups of fields (i.e., public and commercial oriented), rose at about the same rate. Beyond 1976, the number of degrees granted in the "commercial sector" fields increased dramatically, reaching 1.9 times the 1970 level by 1982. Degrees granted in the "public sector" oriented fields, on the other hand, began to fall late in the decade, attaining only 1.2 times the 1970 levels by 1981.

Table 3 presents these observations in a different way. Bachelors degrees granted in the "commercial sector" fields rose 39% between 1976 and 1981. Every discipline in the group registered an increase, ranging from a high of 54% for business/commerce, to 10% for

math/physical sciences. Degrees granted in the "public sector" fields, however, fell by 9% during the same period with every discipline in the group registering a decline.

Thus, the *mix* of bachelors graduates entering the labour market, after having remained relatively stable between 1970 and 1976, shifted dramatically between 1976 and 1981. The share in "commercial oriented" fields rose from 20% to 27%, for the public-sector oriented fields it fell from 72% to 64%, and in the professional fields rose from 8% to 9%. In order for this shift to be reflected in the 1977 statistics on degrees, it would have had to have started around 1973 in the enrolment patterns¹².

Moving to the *masters* and *doctorate* level, the reaction — as reflected by the degrees granted statistics — of students and the universities to the slowdown in public sector job opportunities is less clear. It must be remembered, however, that the higher the education level, the more dependent the graduates have been on the public sector for employment. At the doctorate level, virtually all fields (except engineering) had traditionally placed graduates in the public, not commercial, sector.

One overall reaction was a decrease in the number of graduates. The number of masters graduates rose 47% between 1970 and 1977, and has changed very little since that time (to 1981). The number of doctoral degrees granted has in fact been slowly declining since 1973, and was 7% lower in 1981 than in 1973.

Closing Comments

It must be mentioned that the categorization of the fields into public and commercial oriented groups is convenient for analytical purposes. There remains, however, considerable variation among fields in the extent to which they have depended on either sector for employment. This is particularly true for the biological sciences and mathematics and the physical sciences. They are borderline fields, and the historical tendency for graduates from these fields to enter the commercial

Chart — 4
 Index of Growth in Bachelor's Degrees
 Granted in Canada, 1970-1981, (1970=100)

(2) Includes education, humanities, social sciences (excluding economic and law), biological sciences, no specialization.

or public sector is perhaps not as strong as the impression given here. For the other fields, however, the orientation of their graduates was much more definite.

The latest national data on the employment experiences of graduates are for graduates of 1976, as has been reported here. However, the major shift in the mix of bachelors graduates by field of study has occurred since 1976. Thus, the findings of a national graduates survey conducted in, say, 1982 for 1980 graduates, would likely be different than those of the 1978 survey. Almost certainly the *overall* proportion of bachelors graduates entering the public sector would have declined since 1978, due to the change in the mix of graduates and continued slower growth in the public sector. To what extent, however, is not known. Whether the relationship between *particular fields of study* and employment in various industries or occupations would have changed significantly is another question. These relationships were quite similar between the early and late 1970s, and may continue today.

If there has been a continued movement towards the employment of university graduates in the commercial sector because of slow public sector growth and the changing mix of graduates by field of study, are the types of jobs they locate in the commercial sector changing? Do they have an opportunity to utilize and develop their skills, and contribute to a strong and competitive commercial sector in Canada? And do graduates enter the labour market with the skills in demand to achieve the goal of a strong, competitive private sector? Should there be a continuation in the movement towards a greater proportion of students graduating in engineering, business, the sciences, and other commercial sector related fields, as called for by the Task Force on Labour Market Developments in the 1980s? Surveys similar to those used in this paper could assist in answering such questions if they were conducted periodically, and used in conjunction with other manpower planning work that is underway in Canada.

Notes

Freeman, R.B., *The Over-educated American*, Academic Press, 1976.
Freeman, R.B., *The Changing Economic Value of Higher Education in Developed Countries*, Discussion paper No. 874, Harvard Institute of Economic Research, 1982.
2. For example, see McGee, Sudment, *The Demand for and Supply of Highly Qualified Manpower in Canada in the 1980s*, The Office of Analytical Studies, Simon Fraser University, Barnaby, B.C., 1980.
Economic Council of Canada, *In Short Supply: Jobs and Skills in the 1980s*, Supply and Services Canada, Ottawa, 1982.
Freeman, R.B., *The Work Force of the Future*, an

Overview, Discussion paper No. 626, Harvard Institute of Economic Research, 1978.

3. It was not possible to reliably select only those employed full-time in both surveys. However, the part-time component is not large; in 1978, approximately 5.6% of 1976 graduates were employed part-time.
4. *University Graduates and Jobs: Changes During the 1970s*. Statistics Canada catalogue no. 89-501E (English) or 89-501F (French), Supply and Services Canada, 1983 157 pages. Price Canada \$8.45, other countries \$10.15.
5. An *occupation* is a collection of jobs in which people do the same or similar kinds of work, such as engineering, teaching, sales, etc. This is in contrast to an *industry*, which is a collection of companies or firms engaged in the same kind of economic activity, such as mining, manufacturing, personal services etc.
6. A more technical analysis of the relationship between occupation and field of study, and how it changes over time, can be found in "The Use of Fixed Coefficient Matrices to Relate Occupation and Field of Study in Manpower Requirements Models¹¹", W.G. Picot, printed in a Statistics Canada Journal *Labour Market Analysis*, 1983.
7. For details on this classification system, see The Ministry of State for Science and Technology (MOSST), The Mosst HQM Demand Model Methodology, Ottawa, Supply and Services Canada, 1980.
8. More precisely, the industries included in the *public* sector and their S.I.C. (Standard Industrial Classification) codes are: Education and related services (800 to 809); Hospitals, related health care institutions and miscellaneous health services (821, 822, 827); Welfare and Religious organizations (828, 831); defense services (902); federal, provincial local and other government administration (909, 931, 951, 991); post office (548). All other industries were included in the commercial sector.
9. The same definition of commercial and public sectors (i.e. the Canadian definition) was applied to both the U.S. and Canadian data.
10. In particular, graduates in the physical sciences did not fare as well in the labour market in the 1970s as graduates in the other "commercial sector oriented" fields.
11. Employment and Immigration Canada, *Labour Market Developments in the 1980s*, Supply and Services Canada, 1981.
12. Enrolment data with the field of study classification used in this report are not available for the early 1970s, although it has been available since the late 1970s.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. ²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1978.

²For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, Concepts and Procedures, updating based on 1978 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1970 standard industrial classification (million dollars)

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc plus. ³Gross new production by field less field flared and waste.²Includes crude oil, condensate and pentanes

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1977 and 1978 price indexes are subject to revision. ³1978 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵The major groups include additional components than the selected ones shown.

¹Column numbers refer to Tables 3 and 4, Section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

¹Column numbers refer to Tables 3 and 4, Section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery

¹Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers.

²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

¹This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. ²Seasonally adjusted data for Saskatchewan is not available.

¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. ²Total new settled-for ordinary sales in Canada. Total sales figure does not include sales for Northwest Territories. ⁴Under new or amended contracts.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(949-4020)
Halifax	(426-5331)	Regina	(359-5405)
Montreal	(283-5725)	Edmonton	(420-3027)
Ottawa	(992-4734)	Vancouver	(666-3691)
Toronto	(966-6586)		

Toll free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field

R.E. Drover — Director, Business, Provincial and
Municipal Relations Division

B.J. Lynch — Director General, Business Statistics

R. Platek — Director, Methodology Division

M. Podehl — Director, CANSIM Division

G.J. Brackstone — Director General, Methods
Development Branch

A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises
Division

L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census

P.N. Triandafillou — Director, Industry Product
Division

J.S. Wells — Director General, System of National
Accounts and Analysis Branch

D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Financial Activity in Canada Fourth Quarter 1982

Demand for funds by the non-financial domestic sectors of the Canadian economy continued to be affected by the decline in economic activity. Although there was a steep increase in the funds raised on conventional credit markets, the increase was almost entirely to meet the recession-related borrowing requirements of general government. It is an indication of the weakness in the demand for funds elsewhere in the economy, as well as the associated high savings rates by the personal, industrial and commercial sectors, that, despite a relatively restrained monetary policy, so large an increase in borrowing by governments was undertaken while interest rates were falling.

Total funds raised on these markets by the non-financial domestic sectors amounted to \$22811 million, or 25.5% of Gross National Expenditure, compared with only 6.0% in the third quarter and 29.9% in the fourth quarter of 1981. Of the total, 61% was borrowed by the Government of Canada, 20% by other levels of government, while households raised most of the balance. Non-financial private corporations reduced slightly their liabilities in these market instruments.

The type and nature of the federal government's financing activity in the quarter had a severe effect on the term structure of the instruments used. With net sales of \$9489 million in Canada Savings Bonds and \$2900 million net issues of Treasury bills, there was a marked shift to very liquid securities. In addition, provincial governments raised an additional \$1080 million from net sales of short-term paper as more provinces turned to this market.

If these instruments are excluded, however, there was a significant shift towards longer term financing. Stock issues showed their strongest period since the first quarter of 1981, and for marketable bonds there was a move to longer terms to maturity. Of the \$3950 million gross issues by the Government of Canada, for example, nearly 60% had terms to maturity of ten years or longer while there were no issues with extendible features. By comparison, in the third quarter, there were no issues with terms to maturity of more than five years while over 70% of these were extendible at the holder's option.

This shift to longer term instruments appeared to be attributable to a number of factors, such as a slowing in the fall of interest rates, continued improvement in reducing the rate of inflation, rising stock prices and the need to restructure corporate balance sheets. Interest rates had fallen sharply in the third quarter, and continued to fall in October at a rapid rate. At the end of the month, they had fallen about 500 basis points at the short end of the market and about 340 basis points at the long end from their peak in June. It would appear that some borrowers did not expect further falls to be of the same magnitude in the short term and were prepared to lock-in their borrowing at a fixed rate. At the same time, with the rate of inflation (as measured by the Consumer Price Index) slowing rapidly lenders appeared prepared to take advantage of historically high "real" rates of interest.

While overall weakness of the demand for funds was a major reason for the fall in interest rates, it can also be partly attributable to a slightly less restrictive monetary policy. Whereas earlier in the year, the Bank of Canada had intervened to keep rates higher, to limit the inflationary impact of a depreciating external value of the dollar, in the fourth quarter a relatively strong dollar allowed the bank more room for manoeuvre. As a result, for the first period in the year, the Bank increased its holdings of Treasury bills while in November, the Governor announced the formal abandonment of the policy of targetting the growth of M1. Although this course of action was related to the instability of the relationship between this aggregate and economic activity, M1 showed a substantial jump in December.

Improved conditions on stock markets, coupled with a gradual improvement in corporate profits (in the fourth quarter, non-financial private corporations were net lenders of a record \$2001 million) apparently encouraged many non-financial private corporations to raise equity capital. With the Toronto Stock Exchange Composite Index or 300 Stocks rising 22% over the quarter (and up 47% from the nadir in July) these corporations raised \$1951 million. Among those industries raising substantial amounts were: metal mining, mineral fuels, wood, paper. These funds, together with the bond financing and continued

inventory liquidation (down \$3259 million) allowed these corporations to reduce their bank loans some \$2182 million, thereby making a step towards improving their balance sheets.

Chartered banks loans fell \$755 million (the data have been adjusted to take into account an estimated \$200 million that the banks have written off. Write-offs are not regarded as flows of funds). The chartered banks continued to transfer their mortgages to their mortgage loan subsidiaries. At the same time, they increased their holdings of Government of Canada Treasury bills, a measure of the liquidity build-up as deposits in Canadian dollars rose \$2938 million. This development led to a substantial rise in their excess secondary reserves ratio.

Consumer credit outstanding showed only a marginal increase, reflecting the continuing reluctance of consumers to increase their expenditures. The personal savings rate was a seasonally adjusted 13.4% in the fourth quarter, and a record 13.7% for the year, making it the tenth consecutive year that this rate has remained at or above 9% of disposable income. Households borrowed \$1631 million in mortgages, as the housing industry began to recover, encouraged by lower mortgage rates and government incentive schemes. Attracted by the 12% coupon rate for the first year on Canada Savings Bonds, persons borrowed heavily from the chartered banks to buy this instrument.

Review of 1982

The demand for conventional credit market funds by domestic non-financial sectors of the Canadian economy declined substantially during 1982 to \$46,875 million, or 13.4% of Gross National Product. In 1979 and 1980, borrowing by these sectors had averaged about 21% of GNP and in 1981, at \$83,689 million, it was 25.3%. The personal sector atypically reduced its liabilities during the first three quarters of the year. Non-financial private corporations, borrowers of \$35,308 million in 1981, raised only \$10,744 million.

The government sector increased its demand for funds by over 50% in 1982 and accounted for about 63% of the total of the funds. With an increased share of government borrowing and continued borrowing by their enterprises, marketable bonds represented about 31% of these funds. Canada Savings Bonds and Government of Canada Treasury bills accounted for a further 18% and 11% respectively. In 1981, marketable bonds represented about 26% of funds raised, while Canada Savings Bonds represented about 9% and the amount of Treasury bills outstanding fell. Bank loans and consumer credit both declined after having accounted for 34% and 5%, respectively, in 1981. Mortgages and stocks provided about the same proportion of funds as in 1981; short-term paper, which includes provincial treasury bills, increased its proportion over 1981.

The marked weakness in the demand for funds reflected a continuing decline in real Gross National Product. During 1982, consumption expenditure fell by 2.5%. Especially for durables, this decline was greatest in the

earlier part of the year when interest rates were higher. Personal disposable income, assisted by increased government transfer payments, grew by 9.3% and, with an increase in nominal personal expenditure of only 7.8%, led to an increase in the personal savings rate to 13.7% from the unusually high 12.4% in 1981. The uncertainty over future income discouraged incurring debt and, as inflation and interest rates moderated, there was perhaps an incentive to postpone consumption in expectation of further moderation. The housing market was very weak until the end of the year, when a combination of government incentives, reduced prices and lower interest rates started to take effect. The increase in mortgages by the personal sector of \$3,521 million was less than half that of the previous year and only a quarter of the increase in 1979. With reduced profits and existing excess capacity, investment in plant and equipment by non-financial private corporations fell by \$5,466 million to \$35,724 million. Inventories dropped \$10,181 million. Government expenditures increased, largely due to increases in unemployment insurance payments and debt service charges, both of which grew less rapidly towards the end of the year. With slowed revenue growth, the government sector deficit rose to \$19,063 million from \$4,063 million in 1981. This represented 5.5% of Gross National Expenditure, up from 1.2% the year before. A small increase in merchandise exports combined with a large decrease in merchandise imports to more than offset an increase in service imports (mainly in the form of interest payments) with a resultant record current account surplus of \$2,669 million.

At the beginning of 1982, with the rate of inflation decreasing, the Bank of Canada allowed interest rates to continue their decline from the peak in the summer of 1981. In March, and again in June, short term interest rates rose sharply in the United States. Along with other factors which increased the demand for U.S. dollars, a decreased differential on interest rates between Canada and the U.S. led to downward pressure on the Canadian dollar. The Central Bank used both sales of Treasury bills to increase interest rates by decreasing the money supply and sales of foreign currency to limit devaluation of the Canadian dollar. Between April and June, the federal government borrowed U.S. \$900 million from Canadian banks and U.S. \$1,500 million from foreign banks under standby credit facilities, as well as an additional U.S. \$750 million in Eurodollar bonds, to augment foreign currency reserves. Despite these measures, the Canadian dollar fell to a record low of 76.8 U.S. cents in June. As interest rates fell sharply in the United States in the late summer, the Bank of Canada moderated the decline in Canadian rates to increase the yield differential.

Within a general aim of moderating inflation, the Bank of Canada's monetary policy was focused increasingly on the inflationary impact of devaluation. This focus, along with problems encountered in using M1 as a measure of money supply, eventually led the Bank to abandon targeting the growth of M1 as an indicator of the direction and effectiveness of monetary policy. Financial innovation such as chequable daily interest deposits

and the management of corporations' consolidated balances, with surplus balances transferred to interest-earning accounts or deducted from operating loans, had caused movements out of M1, an aggregate of currency and demand deposits which had been chosen as a measure of money held for transactions purposes. As a result, using M1 as a measure of this economic relationship required increasing interpretation.

At the beginning of the year, the chartered banks' prime lending rate was 17.25%: increasing to 18.25% in June, it was 12.5% at the end of the year. Short-term (90 day) commercial paper started the year at about 15.5%; reaching about 17.05% in June, it ended at 10.25%. At the longer end of the market, bonds which had started 1982 in a range of 16% to 17% showed a less marked increase in June; yield decreases starting in July represented sizeable capital gains to holders. Yield decreases over the year for bonds were somewhat less than shorter term interest rate decreases.

The major issuers of bonds were provincial governments and their enterprises. Of a total \$14,455 million net new issue of provincial bonds, including issues by provincial enterprises and non-marketable bonds such as those sold to the Canada Pension Plan, \$5,859 million or about 40% was placed abroad. Most provincial bonds had terms to maturity of five to ten years. Of "Other Canadian Bonds", which includes non-guaranteed federal government enterprise issues, \$4,382 million of net new issues of \$5,179 million was placed abroad. Foreign placements were usually denominated in foreign currencies, as bond yields were substantially lower for issues in currencies other than Canadian dollars throughout the year. Non-financial private corporations bond borrowing declined from \$5,381 million in 1981 to \$2,838 million.

The federal government increased net new marketable bond issues from \$5,027 million in 1981 to \$5,935 million in 1982. Of the gross issues, those in the first three quarters of the year were generally for terms of less than five years, with 35% having extendible features at the holder's option; in the last quarter of the year, 58% longer term bonds were issued. Of gross new issues of \$9,125 million (of Canadian dollar bonds), \$2,075 million had terms to maturity of ten years or longer. The increase in bond issues is not proportional to the increase in the deficit since Treasury bills provided \$5,025 million and although 1982 sales of Canada Savings Bonds were less than the 1981 record, reduced encashment of that issue meant that more

funds were provided by the instrument in 1982 (\$8,362) than in the previous year.

The reduction in bond yields, prompting a switch to stocks, coincided with an increase in share prices. The Toronto Stock Exchange Composite Index, of 300 Stocks after declining in 1981, fell a further 28% by July. In August the slide was reversed as low prices and expectations of improving earnings made the purchase of stocks attractive. After a small correction in September, share prices in all industry groups except oil and gas and paper and forest products were higher at year end than at the beginning of the year. Net new issues of \$6,409 million, compared to \$13,273 million in 1981 reflect the low prices prevalent in the earlier part of the year. Common shares made up about one third of the larger share offerings; in 1981 issues of common shares had been about equal to those of preferred shares.

Although the weak economy discouraged any expansion for most industries, it increased a demand for longer term financing to replace short-term liabilities. Short-term liabilities had been preferred when interest rates were high and part of the high level of takeover activity in 1981 had been financed by bank loans. As debt service required an increasing portion of reduced profits, there was an incentive to restructure balance sheets. Although short-term paper issues rose during the course of the year, most of the increase was attributable to provincial governments issued \$1,844 million and mortgage loan companies \$2,390 million. These issues, mainly at the end of the year offset reductions by other sectors. Non-residents reduced liabilities to Canadian Banks by \$3652 million and almost all other sectors either limited their borrowing requirements or decreased their outstanding loans. Total bank loans outstanding fell by \$5,164 million.

The reduction in bank loans affected mainly the "Schedule A" banks. Thirty seven more "Schedule B" banks started operations in 1982 making a total of fifty-eight. A number of these mostly foreign owned banks had existed as financial institutions in Canada before receiving their charters. The "B" banks generally increased their assets, sufficiently that 22 banks received an increase in their deemed capital base to allow further growth. While each bank's acquisition of assets is limited by its capital base, the growth of the "B" banks in aggregate is limited to 8% of total assets of the banking industry.

Observations

International Seaborne Shipping Statistics

International Seaborne shipping commodity and port statistics are now available in two new publications: *International Seaborne Shipping Port Statistics* (Cat. No. 52-211, \$21.20 in Canada, \$25.45 elsewhere) and *International Seaborne Shipping Commodity Statistics* (Cat. No. 54-209, \$15.90 in Canada, \$19.10 elsewhere). Vessel activity by Canadian port and the port-to-port movement of over 500 commodities broken into containerized and non-containerized cargo are shown. Data are for 1980.

In 1980 the top three handling ports for cargo were Vancouver, Port Cartier and Sept-Iles. These three ports accounted for 89.4 million cargo tons or 42% of all cargo handled at Canadian ports in international seaborne shipping.

The port of Vancouver handled 21% of the total cargo moved at Canadian ports. Sixty percent of cargo unloaded at Vancouver came from the United States with the largest commodities being phosphate rock, gravel and rock salt. Seven commodities accounted for 79% of loadings at this same port: coal and peat, wheat, sulphur, potassium chloride, lumber and sawn timber, barley, and wood pulp. Forty-two percent of total cargo loaded in Vancouver was unloaded at Japanese ports. Containerized freight accounted for only 2.5% of the total tonnage handled at Vancouver port.

For more detailed information contact the Chief, Surface and Marine Transport, Transportation and

Communications Division, Statistics Canada, Ottawa, K1A 0V1, 613-995-1976.

1981 Census 20% Sample Database — Phase 2

The second group of advance data compiled from information collected from one in five Canadian households in the June 1981 Census is now available. This group of data includes highlight information on ethnicity, language, place of birth, immigration, citizenship and religion of the population, on income of persons and families as well as information on value of dwellings and shelter costs. Some tables provide historical comparisons while others refer only to 1981. Geographical areas covered differ from table to table.

Single copies of the tables can be obtained, free of charge, by writing to Statistics Canada's regional offices or Central Inquiries.

A limited amount of sub-provincial data can also be purchased at these locations. Requests for special tabulations should be addressed to the Customer Services Section, Statistics Canada, Jean Talon Building, 2-D2, Ottawa K1A 0T6.

Complete tabulations will be released in printed bulletins, and on tape and microfiche throughout the coming year.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Source: Quarterly Bulletin, Employment and Immigration Canada. Starting with 1978, preliminary data is obtained from unpublished tabulations.

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹"Beneficiaries" refer to the number of persons receiving \$1.00 or more in unemployment insurance benefit during a specific week each month. ²Annual figures are averages of 12 months. ³Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. ⁴Trainees on courses approved by Canada Employment and Immigration Commission.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. ²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments ¹							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Less imports. ²Total net generation less net exports.

Note: Monthly data includes all producers of electric energy who generate 20 GW.h or more per year. Annual data represent full coverage of generating facilities that may include revisions not available on a monthly basis.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1977 and 1978 price indexes are subject to revision. ³1978 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵The major groups include additional components than the selected ones shown.

¹Column numbers refer to Tables 3 and 4, Section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification¹ (million dollars)

¹ Column numbers refer to Tables 3 and 4, Section 11. ² The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³ Includes special transaction trade, not shown separately. ⁴ Includes scrap. ⁵ Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important changes were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now excludes special industry machinery.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers.

²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

¹This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. ²Seasonally adjusted data for Saskatchewan is not available.

Data in Many Forms . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (Telephone: 995-7406) or to the Statistics Canada reference centre in:

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375) The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — \$8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — \$60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$15 Canada, \$18 Other Countries.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- G. Leclerc (Chairman) — Assistant Chief Statistician,
Economic Statistics Field
- R.E. Drover — Director, Business, Provincial and
Municipal Relations Division
- B.J. Lynch — Director General, Business Statistics
- R. Platek — Director, Methodology Division
- M. Podehl — Director, CANSIM Division
- G.J. Brackstone — Director General, Methods
Development Branch
- A. Meguerditchian — Director, Financial Flows and
Multinational Enterprises
Division

- L.O. Stone — Senior Advisor, Population Studies and
Statistics, Census
- P.N. Triandafillou — Director, Industry Product
Division
- J.S. Wells — Director General, System of National
Accounts and Analysis Branch
- D. McCorkell — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

1981 Census of Population (Part 1): Demographic Highlights

* E.T. Pryor

The twelfth decennial Census of Canada was taken on 3 June 1981. Currently being released from that Census is a wide range of data giving demographic, social and economic benchmarks for the past decade. In coming issues of the *Canadian Statistical Review*, highlights of initial analysis of some of these data will be provided. In this issue, the basic population *dynamics* of Canada over the 1971-1981 decade will be highlighted. In this context, "dynamics" refers to key demographic developments, changes in living arrangements, and migration of the Canadian population.

The description of the 1970s as a period of rapid change has become a familiar cliché. Just how "dynamic" have been the changes in the population composition, how we live with others, and the extent of redistribution of people across Canada can be assessed from 1971/1976/1981 Census information.

Population Change

On 3 June 1981 the population counted was 24,343,181.¹ This figure was 12.9 percent more than that ten years previous. This rate of growth is the lowest decade growth in Canada since the 1930s (10.9% increase between 1931-1941). Still, the absolute growth of 2,774,870 between 1971 and 1981 is the third largest decade growth in the history of Canada. Natural increase, i.e., the difference between birth and death accounted for about 69 percent of this 2.8 million growth with net migration making up the remaining 31 percent. The comparable figures for the 1961-1971 decade were 78 percent natural increase and 22 percent due to net migration. The primary explanation for this change was the decline in fertility during the 1970s versus the baby boom years of the 1960s.

Age

During the 1970s, the population became distinctly older. This aging of the Canadian population is explained by the dramatically lower fertility of the 1970s and increasing life expectancy. The accompanying population pyramid shows the changes by age and sex between 1971 and 1981. Interestingly, with an increase

Table 1

MEDIAN AGE

Census Year	Median Age
1901	22.7
1911	23.8
1921	24.0
1931	24.8
1941	27.1
1951	27.7
1961	26.3
1971	26.2
1981	29.6

of 35.3 percent in the population 65+ which was more than counter-balanced by a 14.1 percent decrease in the population 14 and under, the (dependency) ratio of these populations to the labour force age population (ages 15-64) decreased from 60.4 to 47.5. Looking at age change from another angle, the median age of Canada's population increased by almost 13 percent from 26.2 in 1971 to 29.6 in 1981 (see Table 1). By a considerable margin, this is the highest median age attained in this century.

Looking more closely at specific changes by age groups, Table 2 documents the wide fluctuations in trends by age. The largest percentage gain was among the young adult population (ages 20-34)

Table 2

AGE GROUPS, 1971-1981

Age Groups	Population		Percentage Change
	1971	1981	
0-4	1,816,155	1,783,375	- 1.8
5-14	4,564,745	3,697,735	- 19.0
15-19	2,114,345	2,314,885	+ 9.5
20-34	4,778,950	6,559,995	+37.3
35-64	6,549,725	7,626,220	+16.4
65+	1,744,410	2,360,975	+35.3
TOTAL	21,568,310	24,343,181	+12.9

Age Pyramid of the Population of Canada,
1971 and 1981

- (A) Pre-school (ages 0-5)
- (B) Elementary and high school (ages 6-17)
- (C) Working ages (ages 18-64)
- (D) Retirement age population (ages 65+)

Source: 1971 Census of Canada, Catalogue 92-716, Table 14.
1981 Census of Canada, Catalogue 92-901, Table 2.

at 37.3 percent. For 1981, that was the post-war baby boom generation born between 1947 and 1961. Also, as indicated above, the elderly population (65+) grew by over a third (+35.3%). These basic changes in age composition summarize the demographic impact of the 1970s on Canadian institutions and economic structure: (1) the decline of almost 900,000 in the school age population (5-14); (2) the growth of almost 1.8 million in the young labour force age (20-34) population; and (3) the expansion by over 600,000 in the elderly (65+) population. These three demographic developments in themselves have captured great attention (and countless headlines) as Canada's economic, social, and political systems have attempted to deal with the consequences of these trends.

Fertility

The changes in fertility since the 1960s have been striking. With the information from the 1981 Census on "children ever born", the reductions in fertility since the 1960s are most apparent. Table 3 allows comparisons of the 1941/1961/1981 generations of women in terms of completed fertility (i.e., the average number of children already born) by age groups. For all age groups, the 1981 rates have declined significantly since 1961 and are generally even lower than forty years earlier. Later marriage, increased labour force participation, birth control and increased marriage interruption by separation and divorce have all contributed to this pattern of decline. The question for the 1980s will be whether the low 1981 fertility level for younger women (20-34) will be maintained or on the other hand represents delayed fertility, i.e., a new pattern where labour force entry and career development precedes, instead of follows, as in the past, child-bearing.

Table 3

EVER-MARRIED WOMEN BY AGE GROUP AND NUMBER OF CHILDREN EVER BORN (PER 1000 WOMEN) 1941, 1961 AND 1981

Age Group	1941 ¹	1961 ²	1981 ³
15-19	529*	735	429
20-24	1,003	1,327	687
25-29	1,640	2,178	1,285
30-34	2,425	2,775	1,880

³ *1981 Census of Canada*, Unpublished data.

Living Arrangements

As the country changes in its basic demographics, these trends have brought subsequent revisions to how Canadians live. Decreased fertility and increased divorce, differential male/female mortality among the increasing aged, and other social-cultural changes have had effects on the household and family.

Average household size continued its downward slide declining to less than three persons per household in 1981. In fact, the 1971-1981 decade decline (3.5 to 2.9) was the most severe in this century. The increase in number of households (37.1%) far out-paced the increase in population (12.9%) during the decade. With this rapid increase of households, one significant result is the larger proportion of Canadians living alone. By 1981, a full one-fifth of households contained one person only. This twenty percent compares with 13.4 percent in 1971 and earlier proportions of 9.3 (1961) and 7.4 (1951) percent. More striking, in its human terms, is the fact that the number of Canadians living alone more than *doubled* during the decade from some 812 thousand in 1971 to almost 1.7 million by 1981. Much of the growth occurred among the elderly: the proportion of persons 65 and over living alone increased by 76.6 percent between 1971 and 1981.

Migration

Between 1971 and 1981, all provinces and territories gained population (Table 4). However, among the provinces, only Alberta (37.5%) and British Columbia (25.6%) grew at levels above the national rate of increase (12.9%). In fact, over 42 percent of the population growth in Canada during the decade occurred in these two provinces although in 1981 these provinces accounted for only 20.5 percent of Canada's population. Obviously, internal migration was a major contributor to this westward redistribution of the country's population with only Alberta and British Columbia gaining population via migration. However, interprovincial migration is far more complex than merely a case of people gravitating to the West. For example, while the single largest interprovincial migration stream was the 126,730 Ontario sent to Alberta between 1976 and 1981, Ontario gained 123,710 from Québec. During the same period 39,385 Ontarians moved to Québec. The top five interprovincial migration flows revealed by the 1981 Census were:

(1) Ontario to Alberta	126,730
(2) Québec to Ontario	123,710
(3) Ontario to British Columbia	75,825
(4) Alberta to British Columbia	73,865
(5) British Columbia to Alberta	65,410

Given the volatility of interprovincial migration, how have the general patterns of migration changed in Canada? Is Canada becoming a more mobile society?

Table 4

POPULATION: CANADA, PROVINCES AND TERRITORIES, 1971 - 1981

Province/Territory			Percentage
	1971	1981	Change
	(in thousands)		
Newfoundland	522	568	+ 8.8
Prince Edward Island	112	123	+ 9.8
Nova Scotia	789	847	+ 7.4
New Brunswick	635	696	+ 9.6
Québec	6,028	6,438	+ 6.8
Ontario	7,703	8,625	+12.0
Manitoba	988	1,026	+ 3.8
Saskatchewan	926	968	+ 4.5
Alberta	1,628	2,238	+37.5
British Columbia	2,185	2,744	+25.6
Yukon	18	23	+27.8
Northwest Territories	35	46	+31.4
TOTAL	21,568	24,343	+12.9

In order to explore these questions, data from the comparable census migration question, viz., where the person lived 5 years previously, were composed (Table 5) in order to examine migration changes. The general conclusion from the overview provided by Table 5 is that, counter to popular impressions, the overall mobility rate of the Canadian people remained remarkably constant during the decade. Almost four out of five people (5 years and over) were in the same municipality five years later in all three census years (1971/76/81). Over half the population were in the same dwelling. The one discernible trend during the decade was an increase in the proportion of inter-municipal movers who changed provinces. However, the national pattern does not reveal the considerable differences between provinces in migration. For example, looking at the 1976-1981 period, among Quebec's 1,060,390 inter-municipal migrants, less than six percent were from another province. In contrast, almost 55 percent of Alberta's inter-municipal migrants were from outside Alberta. Obviously, such wide regional variations in mobility will demand thorough analysis of migration — especially in relation to other demographic characteristics and labour force participation, among other characteristics. Comparison of characteristics of the four-fifths who were not migrants versus the migrating one-fifth will reveal whether distinct new migration patterns are emerging.

Conclusion

This brief overview has indicated both significant changes and signs of stability in the basic population measures of Canadians.

Demographic changes in the age structure of the population are adding unavoidable new pressures on Canadian society. Changes in household and family structure suggest new concerns for housing and family policies. Lastly, the continuing regional redistribution of the population, principally by internal migration, will require careful study as to the effects of these regional gains and losses of people and what further population changes are likely in store for the 1980s.

Footnotes

¹ The 1981 undercoverage rate, as measured by the Reverse Record Check, was 2.01 compared to 2.04 in 1976 and 1.93 in 1971.

Obtaining Information from the 1981 Census

1981 Census data are available in a wide variety of publications. The *National Series* gives data for Canada, the provinces and territories. The *Provincial Series* provide county, municipal and metropolitan statistics. The *Profile Series* gives compact data for specific geographic areas, e.g., Federal Electoral Districts, Census Metropolitan Areas, Census Tracts, and others.

In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm and magnetic tapes. Maps and other geographic reference materials are available for many types of data. Direct access to information is also possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

For a free copy of *Products and Services of the 1981 Census of Canada* or general information contact our closest regional reference centre.

For information on how to call Statistics Canada, see inside front cover.

¹In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. ²Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). ³Deflated by the Consumer Price Index. ⁴Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 • Population Statistics

- 14 1. Population by Province
- 14 2. Immigration to Canada, by Country of Last Permanent Residence
- 15 3. Immigration to Canada, by Province of (Intended) Destination
- 15 4. Immigration to Canada, by (Intended) Occupational Group
- 16 5. Births, by Province
- 16 6. Deaths, by Province
- 16 7. Marriages, by Province

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

- 18 1.1 National Income and Gross National Product
- 18 1.2 Gross National Expenditure
- 19 1.3 Gross National Expenditure, Constant Dollars
- 19 1.4 Sources of Personal Income
- 20 1.5 Disposition of Personal Income
- 20 1.6 Sources and Disposition of Gross Saving
- 21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
- 25 1.8 Implicit Price Indexes, Gross National Expenditure
- 25 1.9 Relation between Gross National Product at Market Prices and
Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

- 26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
- 27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

- 32 3.1 Canadian Balance of International Payments, Current Account, All Countries
- 33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
- 34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

¹Excludes profits (net of losses) of government business enterprises. ²Includes the withholding tax applicable to this item. ³Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. ⁴Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. ⁵Includes net income of independent professional practitioners. ⁶See footnote 4, Table 1.2.

¹Includes defence expenditures. ²Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ³Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ⁴The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). ⁵See footnote 4, Table 1.1.

¹The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

¹Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. ²Tax liabilities. ³Withholding taxes. ⁴The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9

¹These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. ²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service.

¹The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments ¹							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. ²Includes crude oil, condensate and pentanes plus. ³Gross new production by field less field flared and waste.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. ²1977 and 1978 price indexes are subject to revision. ³1978 price indexes are subject to revision. ⁴Farm share only of motor vehicles. ⁵The major groups include additional components than the selected ones shown.

¹Column numbers refer to Tables 3 and 4, Section 11. ²Includes special transaction-trade, not shown separately. ³The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ⁴Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification¹ (million dollars)

¹Column numbers refer to Tables 3 and 4, Section 11. ²The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. ³Includes special transaction-trade, not shown separately. ⁴Includes scrap. ⁵Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now excludes special industry machinery.

¹Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. ²Cargo includes air freight and express but excludes mail and excess baggage.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

¹This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. ²Seasonally adjusted data for Saskatchewan is not available.
